

Soluciones a Problemas de Ingenieria de Rios

Pierre Y. Julien

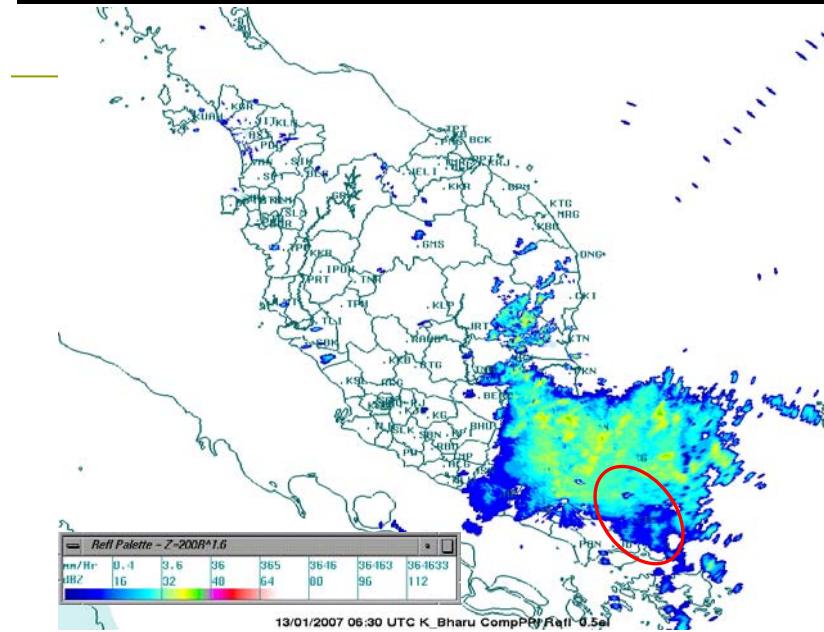

Professor of Civil and Environmental Engineering
Colorado State University, Fort Collins, CO 80523
pierre@enr.colostate.edu

November 19, 2008
Jiutepec, Mexico

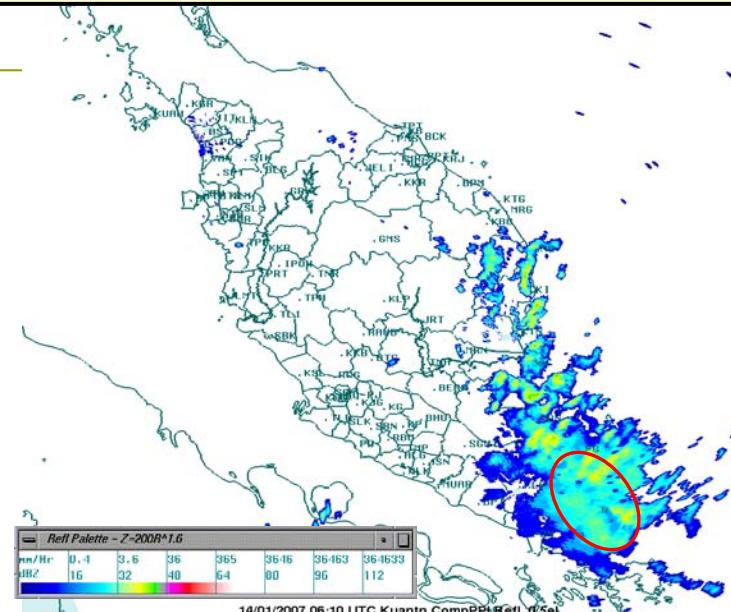

Presentation Overview

1. Flashflood in Malaysia
2. Upland Erosion Control
3. Riverbed Degradation
4. River Engineering
5. Sedimentation
6. Flashflood in Venezuela

2. Upland Erosion Control

Mangun mountain, South Korea

Upland Erosion (continued)

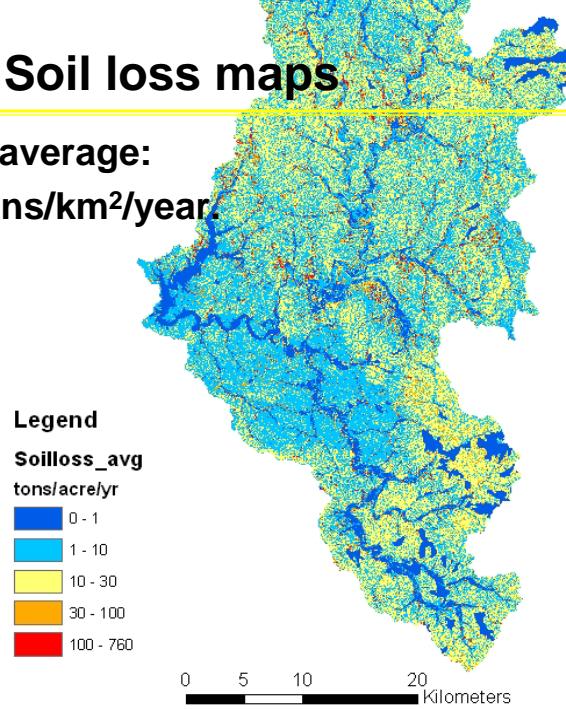

Sheet erosion in the Upper Mississippi River basin

Crop field area of the Imha watershed, S.K.

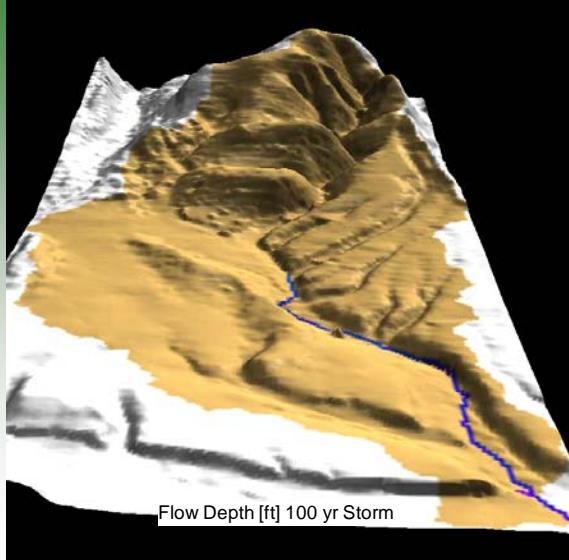

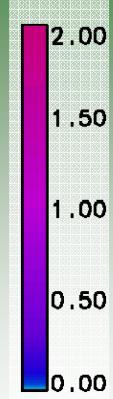

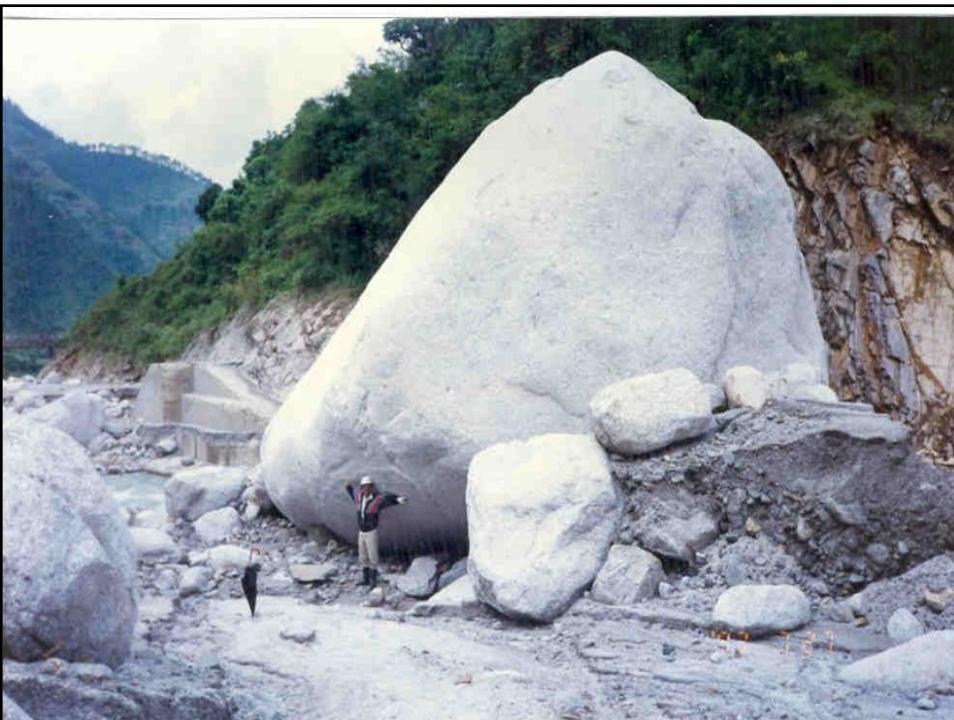

Soil loss maps

Annual average:
3,450 tons/km²/year

CSU Watershed Model TREX

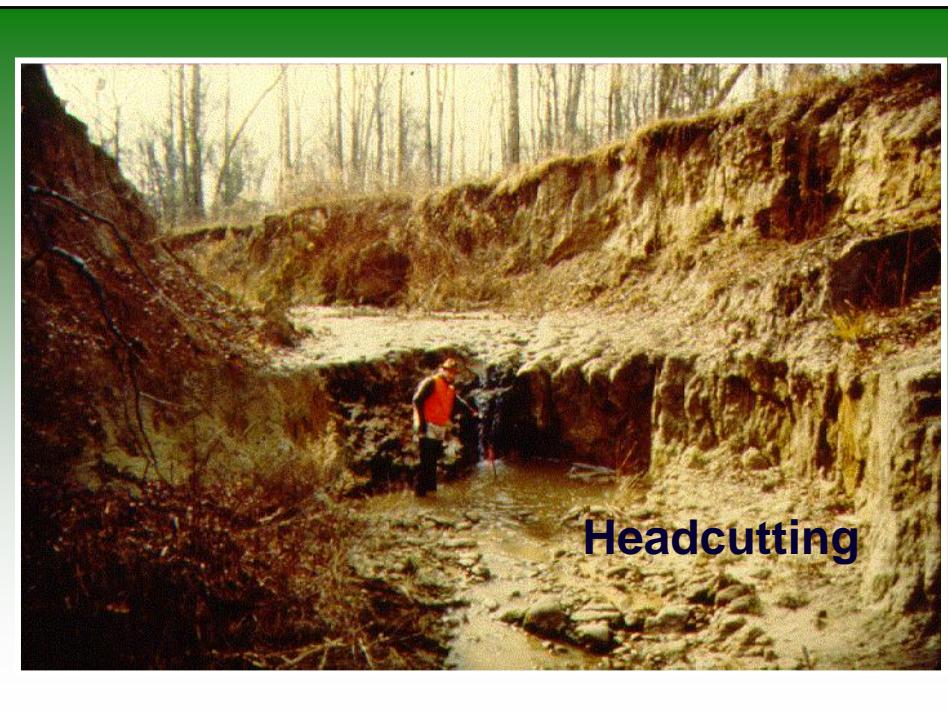

**Upland Erosion of the Loess Plateau
of the Yellow River Basin**

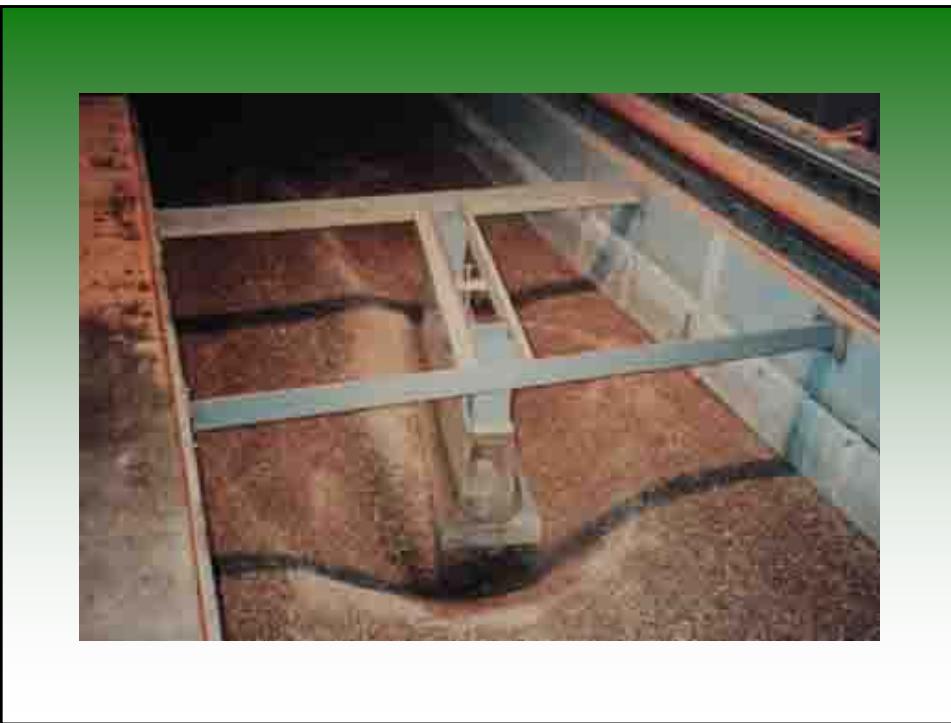

3. Riverbed Degradation

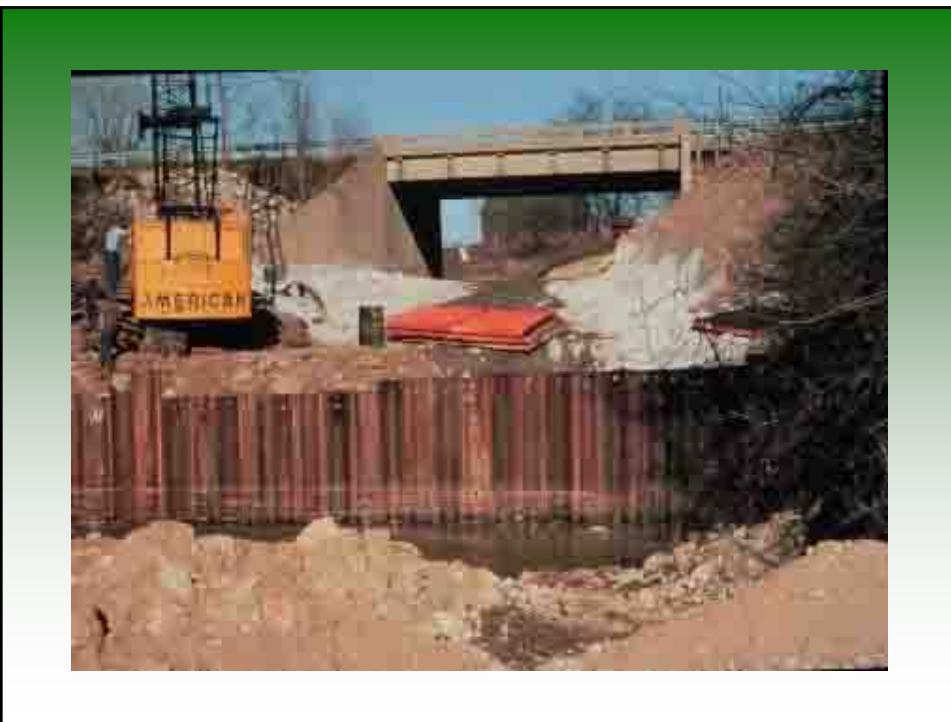

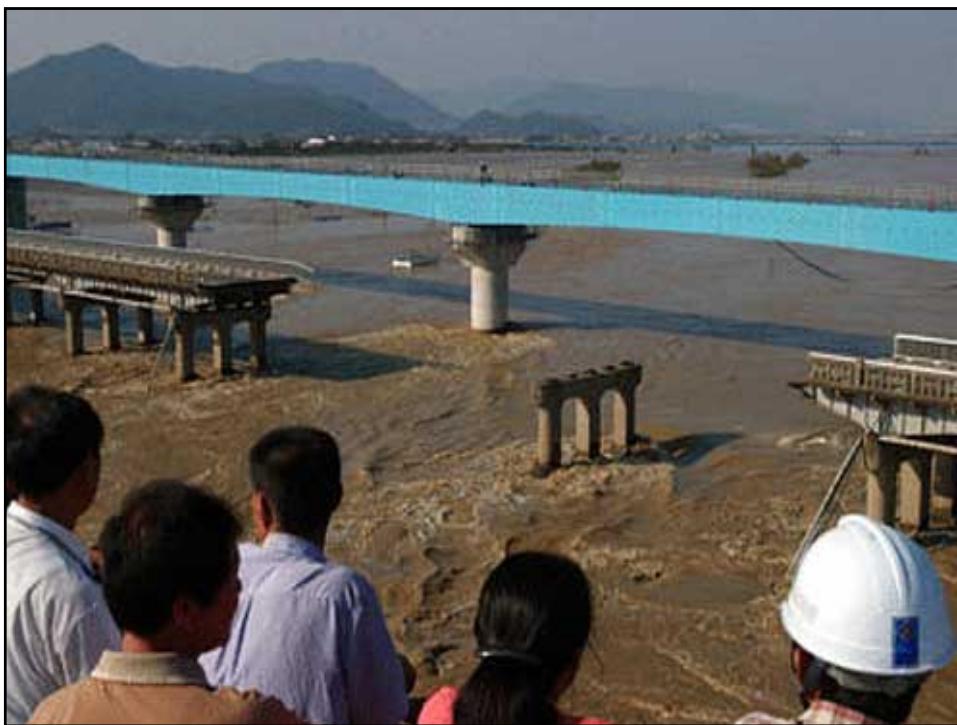

Channel Sediment Sources

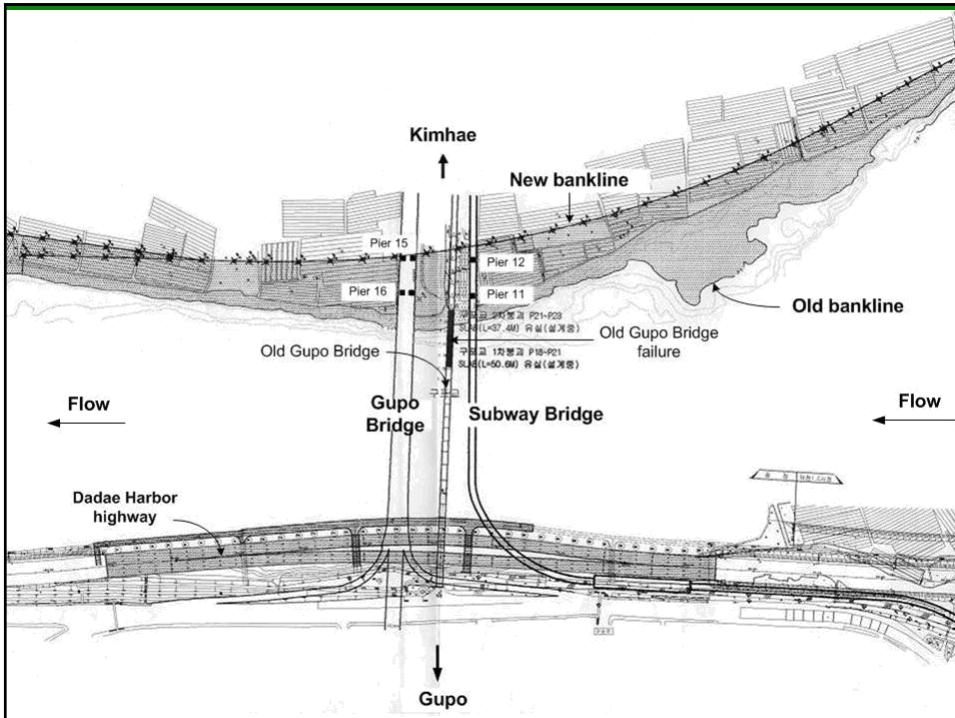

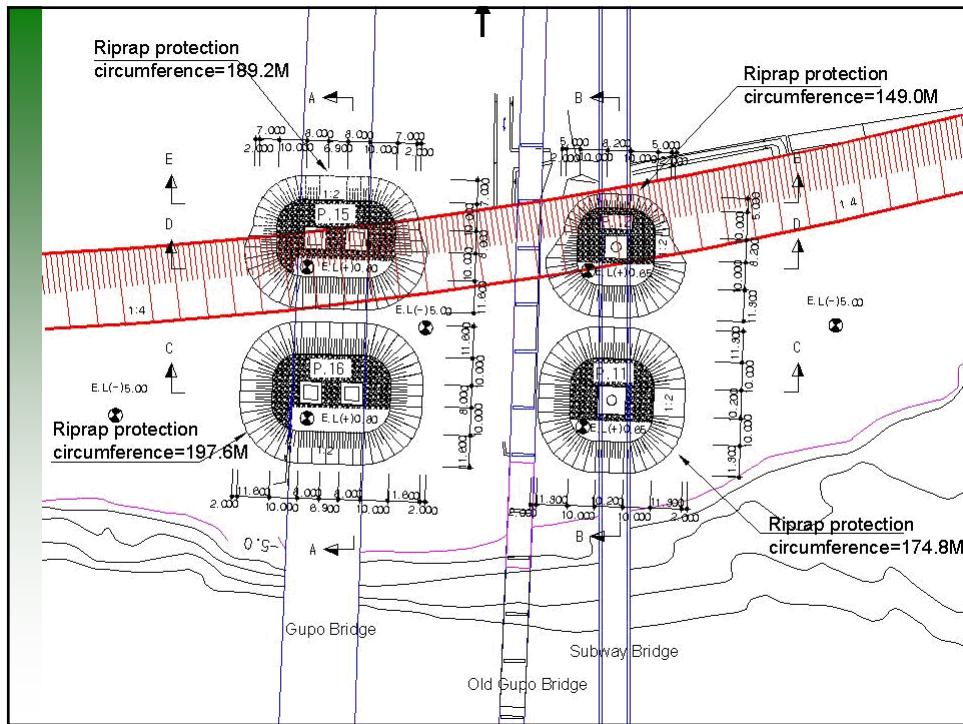

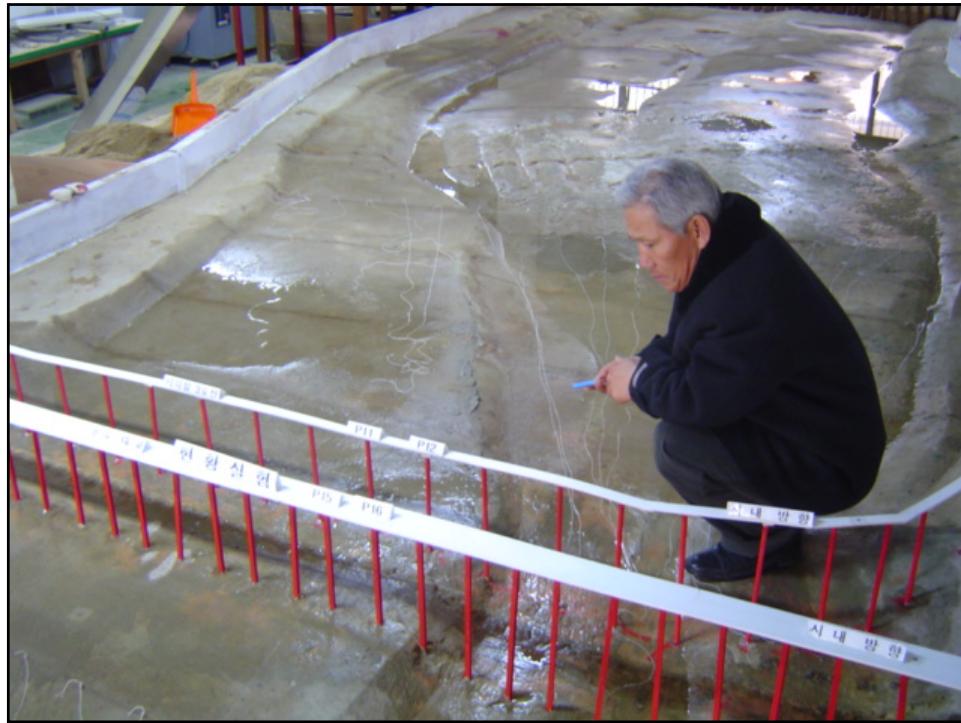

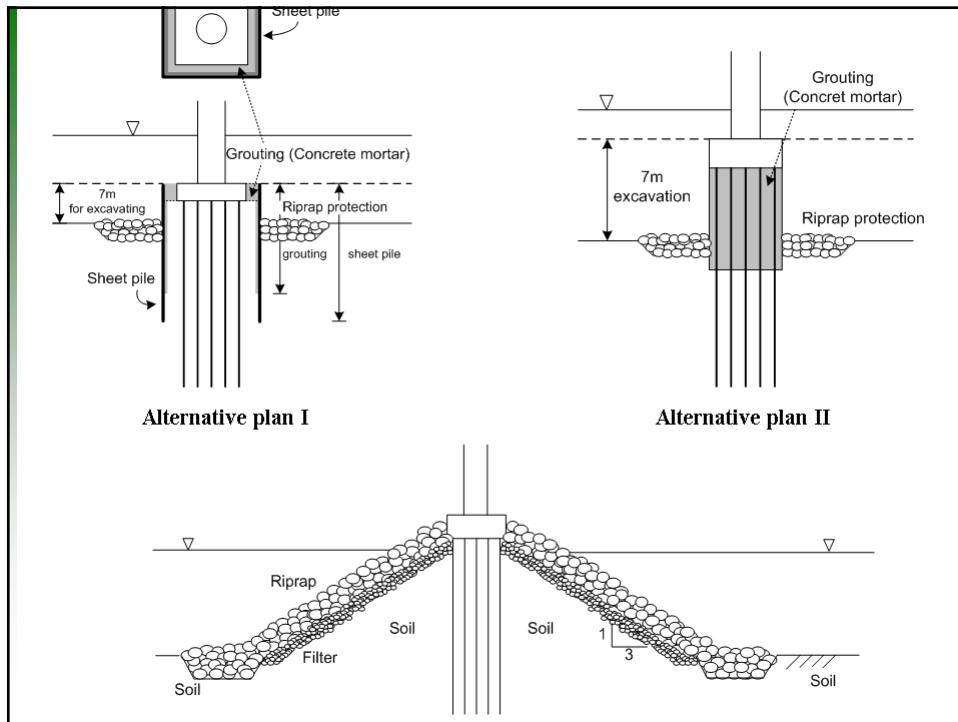

Figure 12. Experiment results with synthetic filters

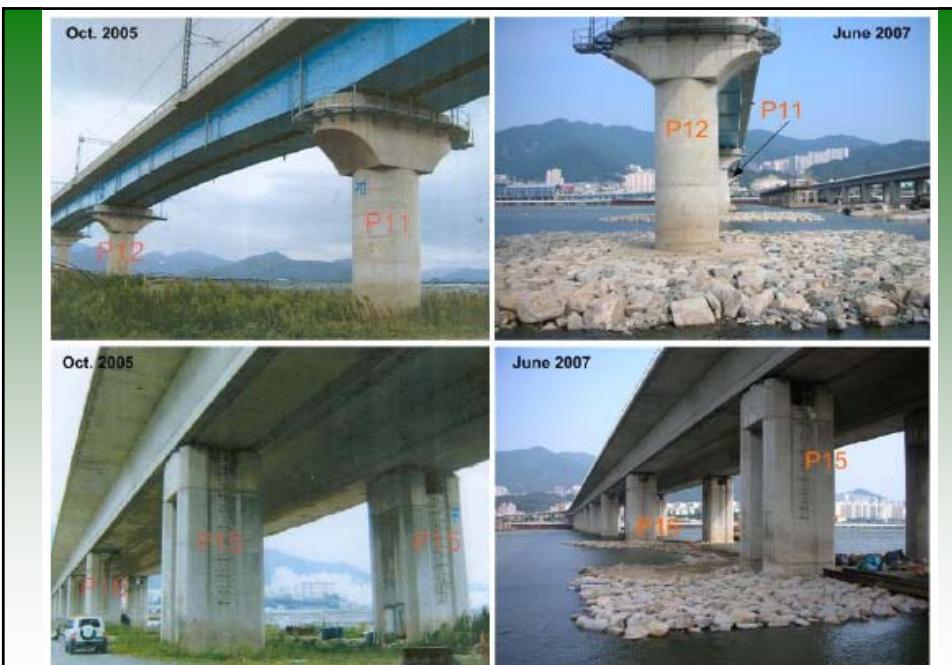

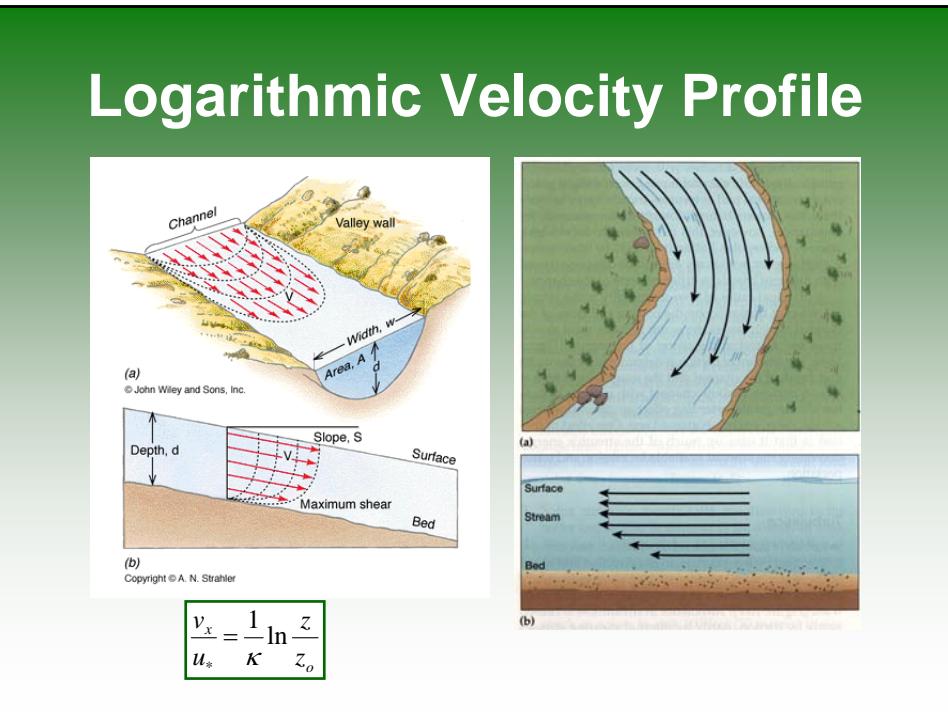

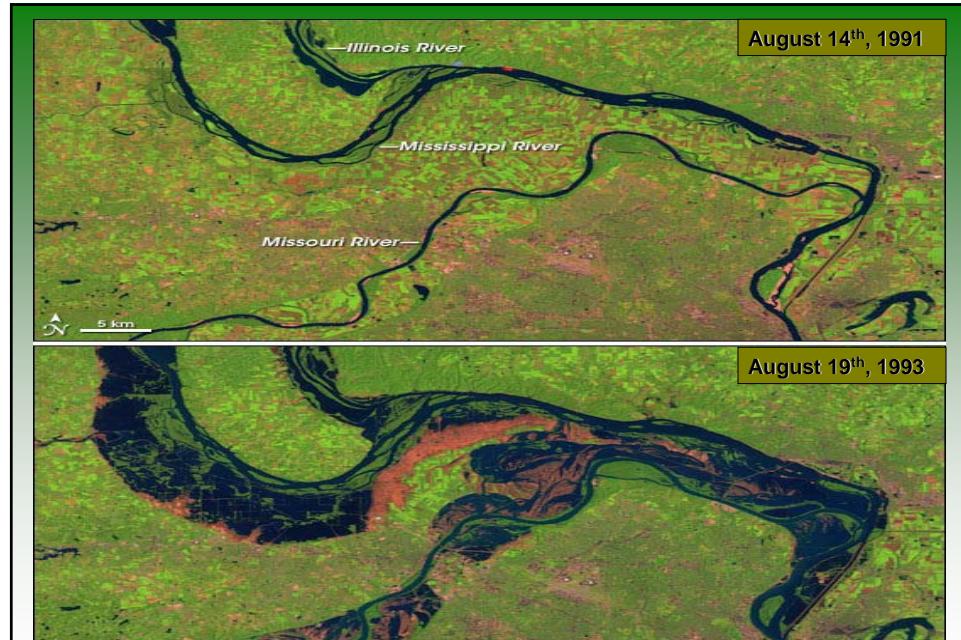

Figure 14. Gupo and Subway Bridge Piers before and after retrofitting construction

4. River Engineering

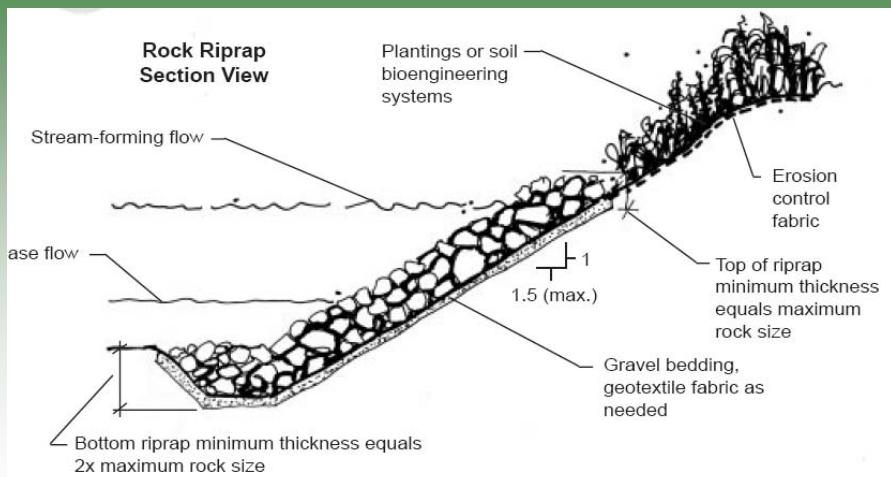

Aerial view of the 1993 Mississippi Flood

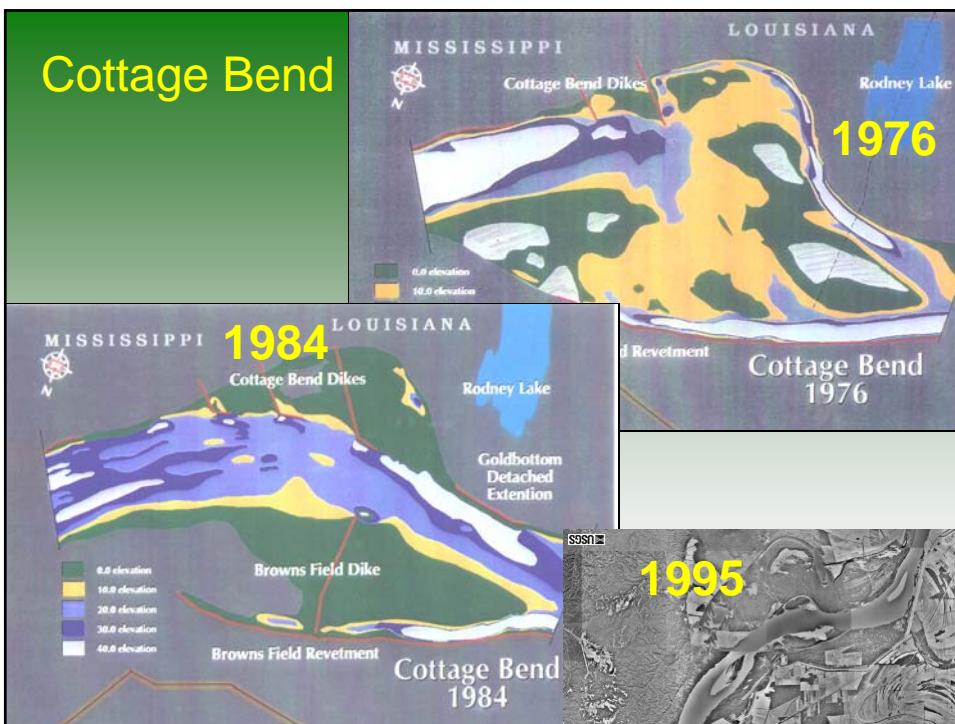

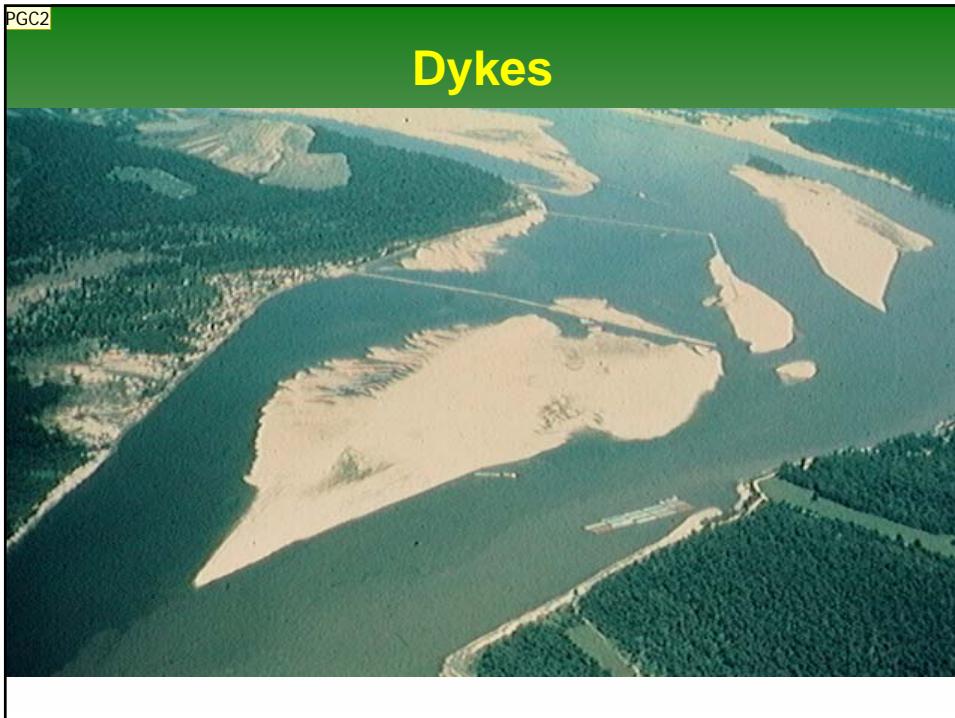

**Levee Failure
on the Mississippi River**

- Levee failure during the 1993 flood event

Riprap Design

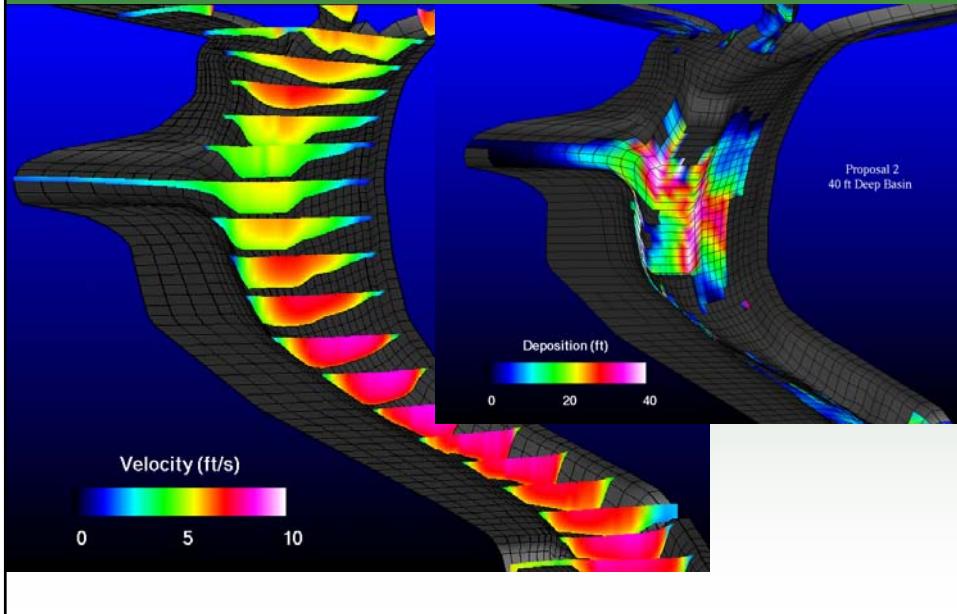

Slide 63

PGC2 Typical dike construction on the Mississippi River
Phil Combs, 8/29/2002

Example 3-D Model Mississippi

Locks and Dams

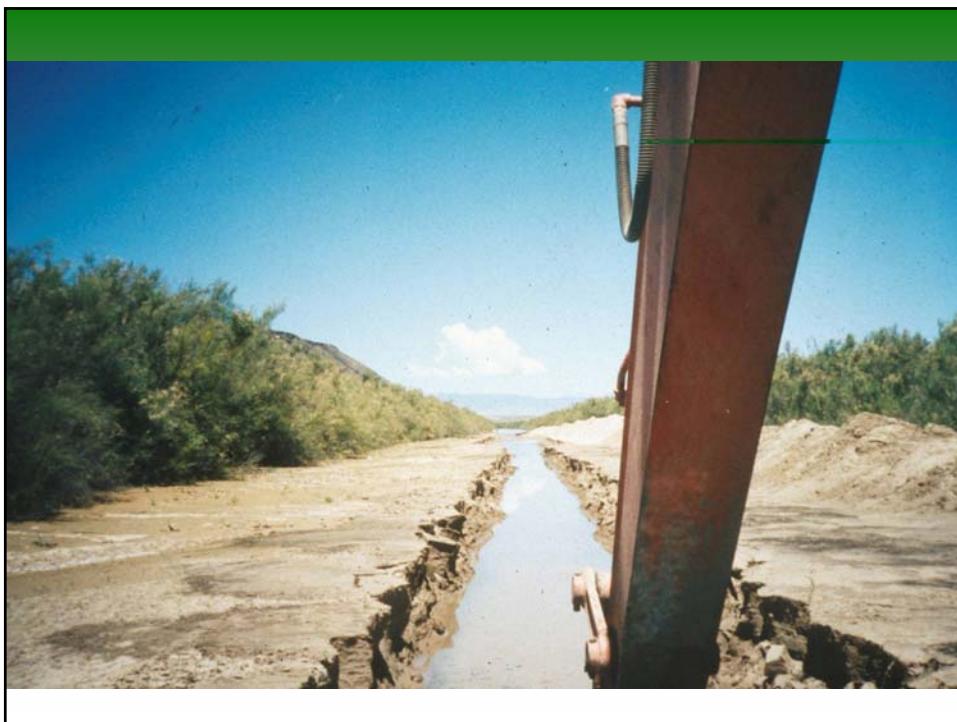

5. Sedimentation Problems

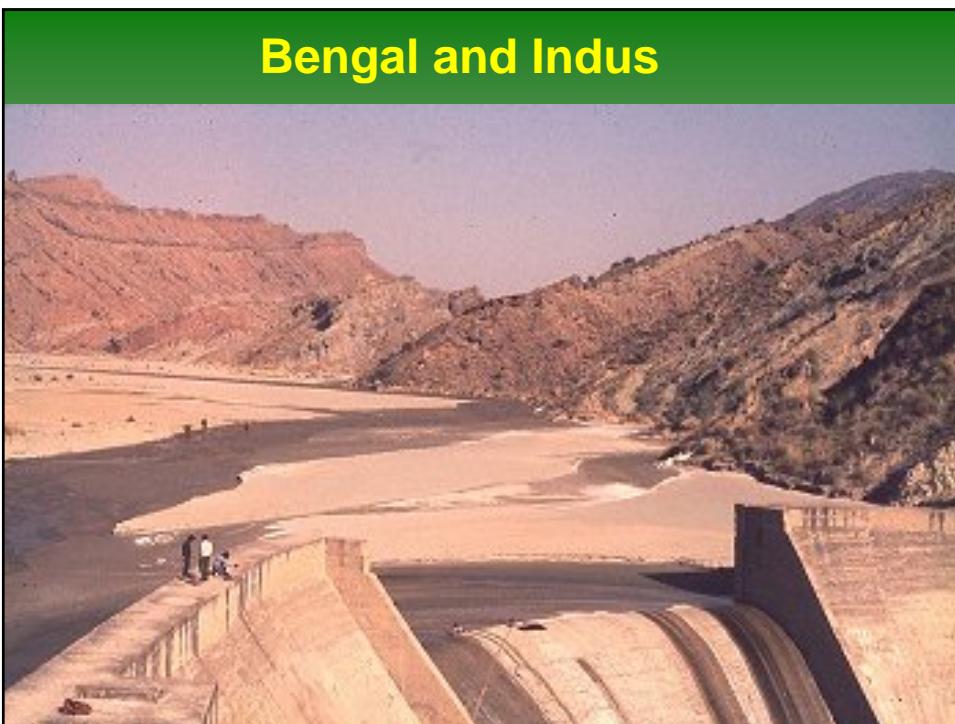

Sediment Plug

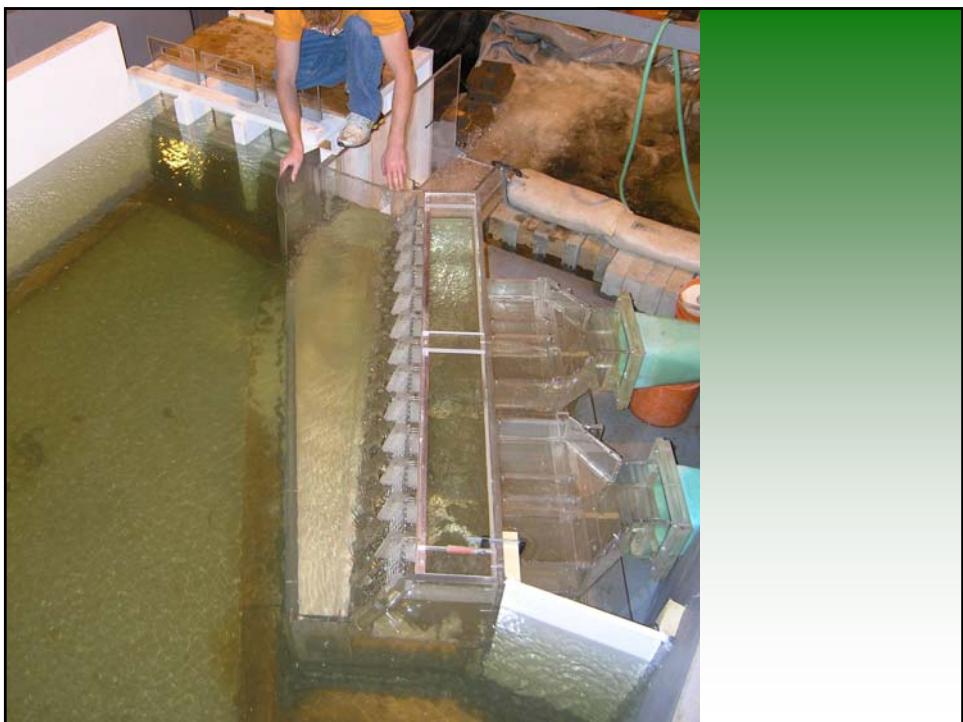

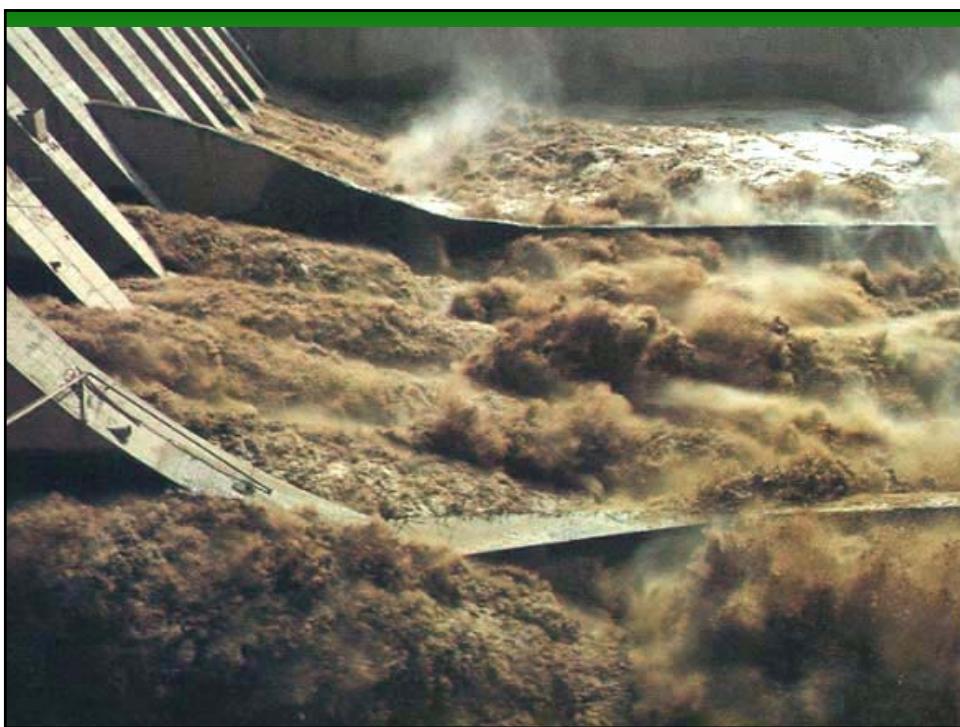

Bengal and Indus

CSU Hydraulics Laboratory

Sediment Flushing

Nakdong River Estuary Barrage

6. Case Study in Venezuela: Flashflood Impact

Example: Vargas Mountains,
Venezuela

An aerial photograph showing a massive area of brown floodwater covering a valley floor. In the background, a city skyline with numerous skyscrapers is visible, partially obscured by haze or smoke. The foreground shows the textured surface of the floodwater.
