Upland Erosion Losses Sediment Sources and Sediment Yield

Pierre Y. Julien Department of Civil Engineering Colorado State University Fort Collins, Colorado

Short Course Gadjah Mada University Yogyakarta, Indonesia July 23, 2009

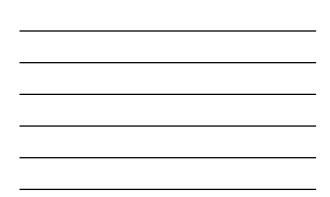

Objectives

Brief overview of catchment modeling and trap efficiency of reservoirs:

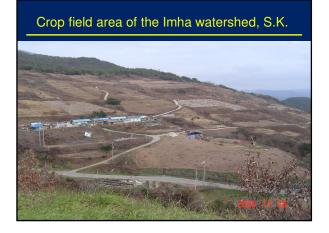

- 1. Upland Sediment Sources;
- 2. Upland Erosion Modeling;
- 3. Dynamic Watershed Modeling;
- 4. Sediment Delivery Ratio;
- 5. Trap Efficiency.

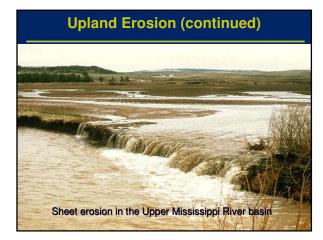

1. Upland Sediment Sources

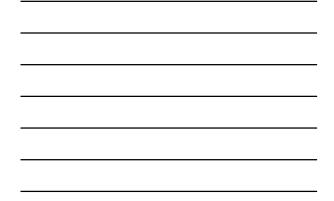

2. Upland Erosion Modeling

RUSLE

Revised Universal Soil Loss Equation

- Widely used method for estimating soil erosion
- The original USLE is an empirical equation
 1. Derived from more than 10,000 plot years of data
 - 2. Natural runoff plots (72.6ft length, 9% slope)
- Originally developed for agricultural purpose.

Main parameters

$\mathbf{A} = \mathbf{R} \mathbf{K} \mathbf{L} \mathbf{S} \mathbf{C} \mathbf{P}$

- A is the computed average soil loss (tons/acre/year)
- R is the rainfall-runoff erosivity factor
- K is the soil erodibility factor
- L is the slope length factor
- S is the slope steepness factor
- C is the cover management factor
- P is the support practice factor

Imha Watershed, South Korea

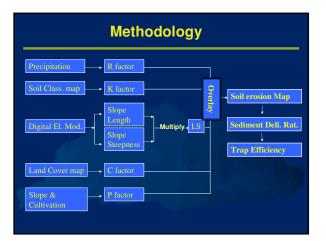

• Watershed area: 1,361km²

Channel length : 96 km

Average watershed slope: 40%

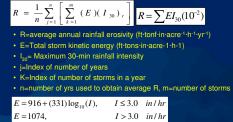

Fast and high peak runoff characteristics

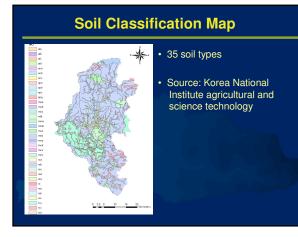

Parameter estimation: Rainfall erosivity (R)

Basic equations (Wischmeier, 1959)

I=Rainfall intensity

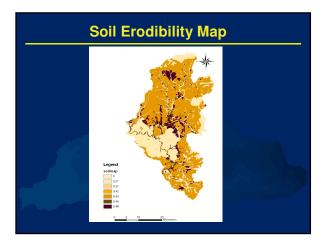

Scoerodent Map 9 R values were transformed ito spatial isoerodent lines 0 R tvalues were transformed ito spatial isoerodent lines 0 R tvalues were transformed ito spatial isoerodent lines 0 R tvalues were transformed ito spatial isoerodent lines

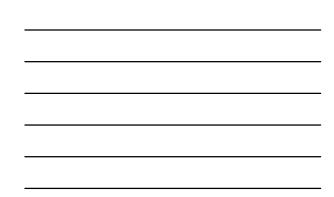

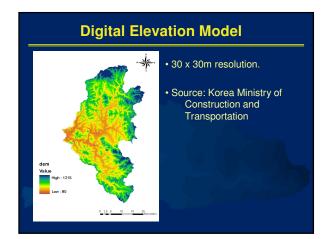

Soil Erodibility Factor (K)

	Organic Matter Conten (%)	
Textural Class	0.5	2
Fine sand	0.16	0.14
Very fine sand	0.42	0.36
Loamy sand	0.12	0.10
Loamy very fine sand	0.44	0.38
Sandy loam	0.27	0.24
Very fine sandy loam	0.47	0.41
Silt loam	0.48	0.42
Clay loam	0.28	0.25
Silty clay loam	0.37	0.32
Silty clay	0.25	0.23

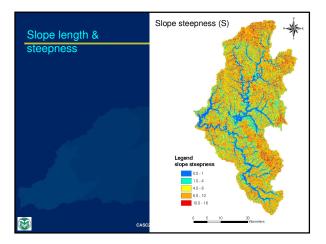

Slope length/steep	oness factor (LS)
Basic equations (Renard, M	cCool, 1997)	
$L = \left(\frac{X_h}{72.6}\right)^m$ • Xh: the horizontal slope length (ft) • m: a variable slope length factor		
$S = 10.8 \times SIN\theta + 0.03,$	$\sigma \leq 9\%$	
$S = 16.8 \times SIN\theta - 0.50,$	$\sigma > 9\%$	
 θ: the slope angle (degree) σ: the slope gradient percentage(%) 		

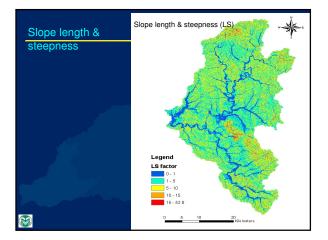

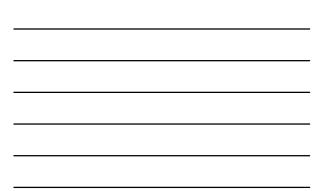

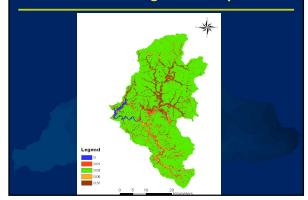

Applied cover management factor				
Num	Land cover type	Cover Management Factor (C)	Applied method	
1	Water	0.00		
2	Urban	0.01	Urban density	
3	Wetland	0.00		
4	Forest	0.03	Trial and Error	
5	Paddy field	0.06	Kim, 2002	
6	Crop field	0.37	NIAST, 2003	

Cover Management Map

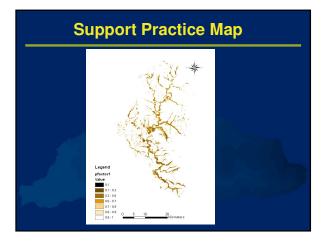

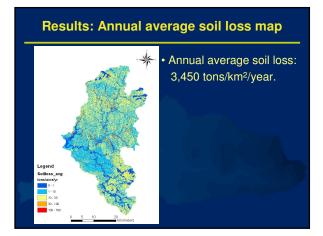

Support Practice Factor (P)

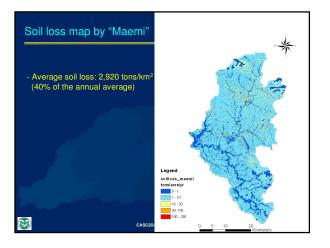

Contouring	Strip Cropping	Terracing
0.55	0.27	0.10
0.60	0.30	0.12
0.80	0.40	0.16
0.90	0.45	0.18
1.00	0.50	0.20
	Contouring 0.55 0.60 0.80 0.90	0.55 0.27 0.60 0.30 0.80 0.40 0.90 0.45

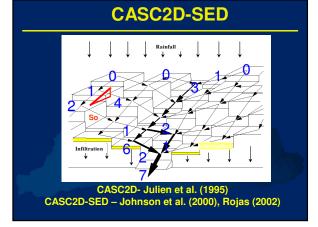

3. Dynamic Watershed Modeling with CASC2D-SED

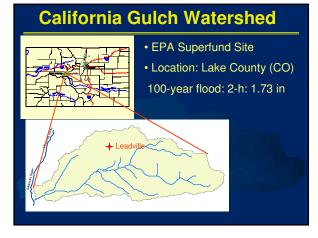

CASC2D-SED

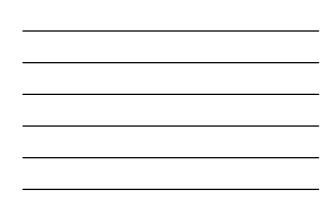

- Water
 - 1. Rainfall
 - 2. Infiltration
 - 3. Overland and Channel Flow

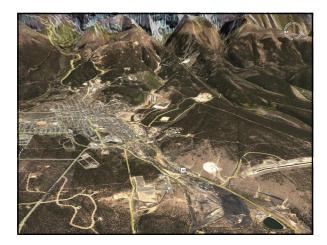

Sediment

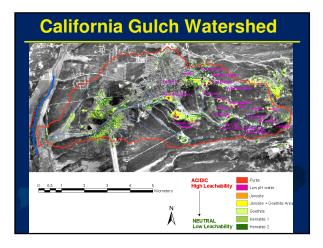

- 1. Upland Erosion and Deposition
- 2. Channel Processes
- 3. Sediment yield

Erosion and Sediment Transport

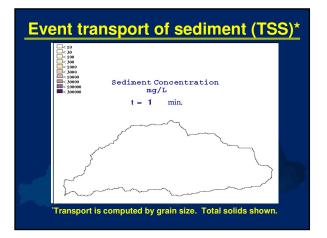

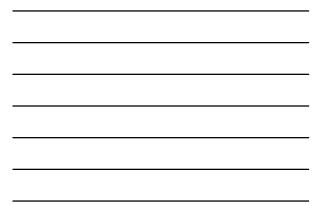

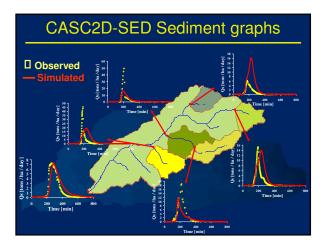

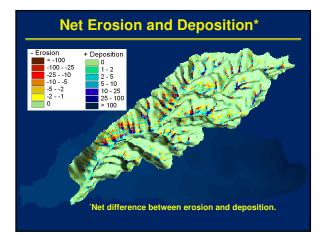

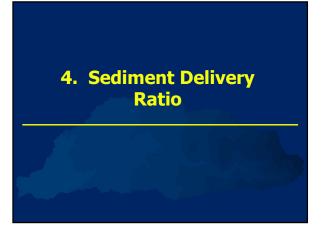

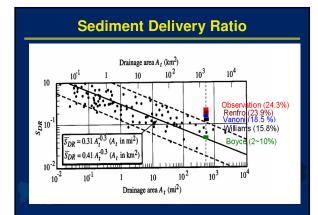

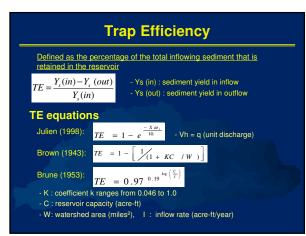

Sec	liment Delivery Ratio
	tio of the sediment yield at a given stream cross oss erosion from the watershed upstream
SDR = Y	A_T - <u>Y: sediment yield</u> - <u>A₁: gross erosion</u>
SDR equation	ons
Boyce (1975):	$SDR = 0.31 A^{-0.3}$
Vanoni(1975):	$SDR = 0.42 A^{-0.125}$
- A : the catchmen	t area (mile²)
Renfro (1975):	$\log(SDR) = 2.94259 + 0.82362 \log(R/L)$
Williams (1977):	$SDR = 1.366 \times 10^{-11} \times A^{-0.0998} \times (R/L) \times CN^{5.444}$
- L : maximum len	ershed (difference elevation between max. and outlet)

Results of trap efficiency
