ECE 555: Final Report for Computer Project

Due Date: 8pm, Tuesday May 10th

Please type a two-page report summarizing your work for the computer project. The final report should be formatted into sections – an introduction, a total of three technical sections to:

1) Concisely describe the key technical concepts illustrated by your program

2) Instruct the user on how to interact with your computer program

3) Explain key routines within your code, what each accomplishes, and how each was developed/tested

and a concluding section. In your conclusion, reflect back on the computer project. Was the project beneficial? How can you improve your computer program? How could the assignment itself be improved?

Email you final report to Dr. Maciejewski and Megan. We will read your report prior to your presentation in order to use the time more effectively.
