Project Proposal Description

Please submit a one page, single spaced Word document to Megan and Dr. Maciejewski via email by 8pm Thursday, March 3rd. The proposal provides us information about your computer project so we can provide you feedback along the way. Your project proposal should address the following questions:

1) What is the main concept your computer program will model?
2) What language will you use to write your program?
3) How will users be able to interact with the program?

as well as provide a very high-level flow for how you plan to develop your program. Remember, the computer project is very open-ended but should be an animation demonstrating a key concept from the course that allows the user to interact with the animation.
