Appendix A: Systems Engineering PhD Process
Appendix B: Program Degree Requirements
Appendix C: Application Packet
This manual has been prepared to acquaint you with the policies and regulations that govern the graduate degrees and certificate in the Systems Engineering program. This document should be read in conjunction with the current Graduate and Professional Bulletin of Colorado State University. It has been written to emphasize certain information contained in the Bulletin and to outline specific program policies and procedures. These requirements supplement, but do not supersede, all statements in the Colorado State University Graduate and Professional Bulletin.

See: [http://graduateschool.colostate.edu/faculty-staff/bulletin.aspx](http://graduateschool.colostate.edu/faculty-staff/bulletin.aspx)

Additionally, a quick-reference **timeline toward your degree** can be found at: [http://graduateschool.colostate.edu/current-students/steps-to-your-degree.aspx](http://graduateschool.colostate.edu/current-students/steps-to-your-degree.aspx)

All Graduate School **forms and applications** for enrolled students can be found at: [http://www.graduateschool.colostate.edu/current-students/forms/index.aspx](http://www.graduateschool.colostate.edu/current-students/forms/index.aspx)

All Graduate School **deadlines and important dates** can be found at: [http://graduateschool.colostate.edu/policies-and-procedures/deadline-dates/](http://graduateschool.colostate.edu/policies-and-procedures/deadline-dates/)
Introduction

The Colorado State University (CSU) Systems Engineering program and curriculum was created based on significant national and local industry input. Through an extensive industry survey conducted in 2007, over 600 responses helped identify the need for Systems Engineering and specifically what areas of focus should be addressed in a Systems Engineering program. CSU’s Systems Engineering program began in 2008 with the initial offering of a Master of Engineering (M.E.) with a specialization in Systems Engineering. The M.E. is offered on campus and at a distance.

Since 2008, new courses have been offered every academic year and student enrollment has continued to increase. In 2010, the Master of Science (M.S.) and Doctor of Philosophy (Ph.D.) in Systems Engineering were offered on-campus. Beginning August 2012, both of these degree programs began to also be offered at a distance. The Graduate Certificate was added as an option for both degree-seeking and non-degree seeking students in late 2016. This handbook provides guidance for prospective and current graduate students in Systems Engineering. The list of Systems Engineering faculty and their research interests should be consulted when seeking an M.S. thesis or Ph.D. dissertation research advisor (located at http://www.engr.colostate.edu/se/people/associated-faculty/).

All programs are offered at a distance and on-campus.
Admission Requirements

Competencies listed below may be demonstrated via coursework or if there is adequate professional, technical experience, via a career path.

For admission into the program the responsibility lies on the student to show that he/she has the foundation that is needed for the Systems Engineering program. For example, the resumé, letters of recommendation and statement of purpose could all provide evidence of analytical/technical competencies learned if the transcripts do not reflect a direct correlation to an analytical skill set.

Per University policy a student can enroll in introductory courses in Systems Engineering without being formally admitted into the program. However, successful completion and/or above average performance in these courses does not ensure admission into the program.

Our Graduate Certificate program requires:

- A completed four-year bachelor’s degree from a regionally-accredited institution
- Certificate applicants are strongly recommended to have:
  - B.S. degree in engineering, mathematics, business, life sciences, or natural sciences
  - A cumulative 3.0 GPA
  - Completed a basic statistics course and Calculus I

Our degree programs require:

- Four-year B.S. from a regionally-accredited institution with a GPA of at least 3.0
- Calculus I (MATH 160 or equivalent) – some course options within our degrees may have higher math prerequisites
- Basic Statistics (STAT 301 or equivalent)
- GRE test scores are required only if none of your previous degrees were conferred by an institution in the U.S.

Master of Engineering (M.E.)

- B.S. degree in engineering, mathematics, business, or a technical science discipline

Master of Science (M.S.)

- B.S. degree in engineering, mathematics, or a technical science discipline
- For Plan A, a faculty advisor must be secured by the applicant before being considered for admission. Plan B does not require an advisor prior to admittance

Doctor of Philosophy (Ph.D.)

- B.S. degree in engineering, mathematics, or a technical science discipline
- If B.S. is not in engineering, a master’s in engineering is strongly recommended
- The applicant must secure a faculty advisor before being considered for admission.
Application Process Overview

To learn more about our program please visit: http://www.engr.colostate.edu/se/

If you meet the minimum requirements and are interested in being considered for a **Systems Engineering On-campus or Distance program** please review the following:

**General Admissions Steps**

Below is a brief overview of the admissions process. **Detailed and necessary instructions for each step are found in our Application Packet (Appendix C).** Failure to follow specified directions in the Application Packet may lead to an incomplete and/or rejected application.

A. If you are applying for the M.S. Plan A (thesis) or the Ph.D., first secure a faculty advisor. **Your Research Interest Summary should be prepared before contact is made with potential faculty advisors.** Some students choose to not fill out the Graduate School application and pay the fee until they have found a faculty member that has agreed to be their advisor; this is acceptable.

B. If you are applying for the Certificate, M.E., or M.S. Plan B (project), or have already secured a faculty advisor for M.S. Plan A or the Ph.D., fill out the Graduate School application: [http://gradadmissions.colostate.edu/apply](http://gradadmissions.colostate.edu/apply)

C. **Concurrent to your Graduate School application**, please submit the following materials (details and addresses found in Appendix C):
   1. One **official** transcript from **every** post-secondary institution attended (transcripts from CSU are not required)
   2. Current resumé or CV
   3. Three letters of recommendation*
   4. A statement of purpose* (speaking to your fit with CSU’s Systems Engineering program; this is different from a M.S. Plan A or Ph.D. applicant’s Research Interest Summary)
   5. **International students and students who earned a degree from a non-U.S. institution** must also include both of the following:
      a. GRE scores* (exempt only if applicant has recently earned a degree from a U.S. institution)
      b. TOEFL and/or IELTS scores (exempt only if the primary official language of applicant’s home country is English or if he or she has recently earned a degree from a U.S. institution)

Contact the International Programs Office for more information.

**For consideration Steps A-C (numbers 1-5) must be completed in full.**

* Items required only for degree programs; if you are applying for the certificate do not include these.

See the Systems Engineering Application Packet (Appendix C) for our detailed admissions process.

Graduate School and Systems Engineering Standards and Procedures

Scholastic Standards
By Graduate School regulations, students must maintain good academic standing by meeting two requirements, which are discussed in detail below:

- Maintain a cumulative GPA of at least a 3.0 and
- Maintain satisfactory progress within their department or program

GPA
Students must demonstrate acceptable performance in course work after being admitted to the graduate program, which requires a cumulative grade point average of at least 3.0 be maintained for each of the following four groups of courses:

1. Regular courses taken for a traditional grade and numbered 300 or above (regular courses have numbers ending with 00 through 79). Regular course work is defined as courses other than independent or group studies, research courses, open seminars, thesis/dissertation credits, study abroad, U.S. travel, supervised college teaching, student teaching, practicum, internship, field placement, unique title courses offered through the Division of Educational Outreach, and any courses graded pass/fail, and
2. All regular and non-regular courses graded traditionally and numbered 300 and above, and
3. All traditionally graded courses numbered 300 and above listed on the graduate program of study (see the GS6 Program of Study section), and
4. All regular and non-regular courses graded traditionally and numbered 300 and above that are listed on the graduate program of study.

Please note that any course taken prior to admission into the program does not count toward the above GPAs, per Graduate School policy. 300-level courses cannot be used to satisfy degree requirements for graduate degrees.

Failure to maintain GPA requirements results in being placed on academic probation. New regularly admitted students will not be placed on probation until they have completed 12 credits or two semesters of graduate work, whichever comes first. The probationary period extends for one semester beyond the one in which this status is acquired. Students on probation are subject to dismissal by the academic program or the Dean of the Graduate School at the end of the probationary semester unless good academic standing has been regained. This requires adequate improvement in cumulative grade point averages (3.00) and/or satisfactory progress as determined by the student's graduate advisory committee.

For all Master of Engineering and Master of Science students: in addition to the above requirements, you must earn a “C” or better in all coursework for it to apply to a Systems Engineering degree (see Graduate and Professional Bulletin E.1.3). A “C-“ is not acceptable.

For PhD students: in addition to the above requirements, in order to pass the “Qualifying Process” you must pass all courses with a “B” or higher. A “B-“ is not acceptable.

Satisfactory Progress
Per Graduate School policy, good academic standing also requires satisfactory progress in the overall graduate program. When a student’s graduate advisory committee or an appropriate program graduate committee finds that a student is not making satisfactory progress toward the degree due to factors other than grade point average, and that satisfactory progress cannot be anticipated, a plan should be created and the following steps should be taken:

1. Inform the student of the concerns, create a progress plan with the student, develop a timeline and inform the student of the potential consequences (dismissal) if the progress is not satisfactory.
2. The committee should keep in contact with the student to give feedback during the progress plan timeline and document such contacts and their outcomes.
3. At the end of the timeline, if progress is not adequate, the committee may recommend dismissal from the program. The recommendation goes to the Program Director and the Dean of the Graduate School and should include documentation on the steps taken with justification for this action.

Systems Engineering encourages students to make steady progress toward their academic goals and wants to ensure students reach graduation in a timely manner. A Systems Engineering student who meets one of the following conditions will be contacted to set up a progress plan and timeline:

- The student has successfully completed (earned “C” or above/“S”) less than 9 credits toward a Systems Engineering degree in two calendar years
- The student has received two or more “unsatisfactory” annual progress reports from their Ph.D. advisor (applies to Ph.D. students only)

Graduate Procedures and Required Paperwork

The following documents are distributed and regulated by the Graduate School, additional forms and information for enrolled students can be found at: http://www.graduateschool.colostate.edu/current-students/forms/index.aspx

GS6 Program of Study

The Program of Study (GS6) must be filed with the Graduate School before the time of the fourth regular semester (fall and spring) registration. If the GS6 is not submitted by this time, the student will have a registration hold placed on their account until the GS6 has been received by the Graduate School. The purpose of the GS6 is to ensure the graduate student is working toward well-defined goals approved by his/her advisory committee while meeting program and Graduate School standards. The Graduate School reviews each GS6 and determines whether or not the program of study conforms to University policy. Problems are reported to the student and program so that they can be corrected. Assistance in completing the GS6 form is available on the Graduate School website.

Changes in the Program of Study Coursework

After the approval of the GS6, changes to the Program of Study are recorded on the GS Form 25 which is filed during the semester of graduation and prior to the published deadline (approximately 6 weeks after the beginning of the semester). For more information about the GS25 see below section.

Courses listed on the GS6 that have been taken and for which a grade has been received (A through F, I, S or U) may not be removed from the Program of Study. All courses listed on the GS6 must have been passed with a C or higher to qualify for graduation. Any coursework changes on the GS25 must be approved by the student’s faculty advisor (if applicable) and the program advisor. Failure to do so may result in courses not being used toward degree requirements.

Changes in Advisor and Advisory Committee

After the GS6 has been approved, permanent committee replacements are arranged by filing a GS form 9A. Signatures are required for any member(s) dropped from the committee; additionally, advisor/co-advisor changes require the signatures(s) of the individual(s) added. This form also requires the signatures of the student, faculty advisor, Systems Engineering representation, and graduate school representative.

Whenever a member will be absent for an important function of the committee, or when a member will be absent for a semester or more, a replacement will be designated by the Program Director with concurrence of the faculty member being replaced. The Program Director shall designate any eligible replacement by letter to the Graduate School indicating the time period during which the replacement shall serve. At the expiration of the designated time period, the original member shall resume membership.

GS25 Application for Graduation

Near the beginning of the semester in which the student plans to graduate, a GS25 must be filed with the Graduate School. Any changes to the original GS6 (courses added or dropped) are to be made on this form
and approved by the student’s faculty advisor and the program advisor. Please leave Section 3 (Departmental Requirements) blank. The Application for Graduation can be accessed at http://www.graduateschool.colostate.edu/current-students/forms/index.aspx

Please note that the Program Deadline for receipt of the form is 10 business days PRIOR to the Graduate School deadline. Refer to the Graduate School website at http://www.graduateschool.colostate.edu for a complete listing of Graduation Requirements and Deadline Dates.

Changes in the GS25

If you do not graduate in the semester you intended, you will fill out the online “Reapplication for Graduation” by the graduation application deadline of the next semester in which you plan to graduate. This does not generate a new GS25, and there is no paper form required for the reapplication.

If you need to change courses after you have submitted a GS25, you will use the GS52.

Enrollment Requirements in Graduation Semester

Graduate degree candidates must be either enrolled for at least one credit or must register for “CR,” Continuous Registration, (see below for an explanation of “CR”) during the term (fall, spring, or summer) in which they file for graduation. Students who fail to register for CR or a credit-bearing course in the semester in which they apply to graduate will not be allowed to graduate that semester and will be required to apply for readmission ($150.00), register for CR ($150.00), and reapply for graduation.

Continuous Registration (“CR”)

All graduate students at Colorado State University are required to be continuously registered in the fall and spring semesters throughout their degree programs. This policy applies from the time of the first enrollment through the graduation term. Registration is also required during the summer term if it is the student’s graduating semester.

Students may fulfill this requirement by registering for any graduate credit-bearing course or Continuous Registration (CR), which is non-credit-bearing and carries a $150 fee. Registration for CR status is accomplished in the same way as registration for courses. The course reference numbers (CRN) for Continuous Registration appears in the class schedule under the subject CR.

Students may register for CR instead of credit-bearing coursework for the following reasons:

1. They will not be working on their degree requirements, but will be leaving the University temporarily for professional or personal reasons (mission service, medical or parental leave, work, etc.).
2. They are done with all credit-bearing course requirements and are applying to graduate that semester (applies to summer, fall, and spring semesters).
3. They are done with all credit-bearing course requirements and will be actively working on degree requirements, but do not require the use of University resources. (Students utilizing CSU facilities to conduct their research must not enroll in CR; they must enroll in the appropriate number of research, thesis, or dissertation credits.)

Students enrolled in CR have access to library and campus computing services; they pay a mandatory University Technology Fee. On-campus students may choose to purchase CSU student health insurance and/or access CSU Health Network for an additional fee.

New policy starting Fall 2017 semester:

Students are limited to a maximum of 10 semesters total of CR

- Students in their 1st, 4th, and 8th semesters of CR are required to submit a student plan to their Advisors for review by their Advisory Committees. The plans should state their intention and progress toward degree completion with academic expectations and timelines.
- A registration hold will be placed on a student with more than 10 semesters of CR. This may be petitioned. The petition must include the student plan.
**Program Time Limit**

There is a ten-year time limit for completion of the master’s or doctoral degrees. Courses to be applied toward fulfilling the requirements for the master’s and doctoral degrees, including any which may have been transferred from another institution, must have been registered for and completed within the ten years immediately preceding the date of completion of requirements for the degrees. If you are applying a 30-credit master’s degree to the Ph.D., this master’s degree can be older than 10 years.
The Graduate Certificate in Systems Engineering Practice provides an introduction to the systems engineering discipline and hands-on experience applying systems thinking to real-world problems. It is available to both degree-seeking and non-degree-seeking students.

You can expect the Certificate program to take one to two years if you are a part-time student (1-2 classes per semester) and as little as one four-month semester if you wish to take all 12 credits at once. Summer courses are not offered.

When students enrolled in the Systems Engineering Practice Certificate complete their final required course, they will be awarded the certificate, which appears on their transcript. Students must be enrolled in the certificate program the semester in which they complete course requirements; a student cannot be back-awarded a certificate.

**Program Course Requirements**

- ENGR 501 (3 cr.) Foundations of Systems Engineering
- ENGR 530 (3 cr.) Overview of Systems Engineering Processes
- ENGR 531 (3 cr.) Engineering Risk Analysis
- One from:
  - ENGR 502 (3 cr.) Project and Program Management (previously MECH 501)
  - CIS 600 (3 cr.) Information Technology and Project Management
  - CIS 670 (3 cr.) Advanced IT Project Management

**Transfer Credit**

No transfer credits or course substitutions are permitted for Graduate Certificates.
Our Master of Engineering program produces graduates who can design and manage complex multidisciplinary engineering systems with a rigorous systems engineering approach. The applied focus in courses builds skills that can be utilized immediately in current projects and prepares students for future career opportunities.

You can expect the Master of Engineering program to take one to two years as a full-time student (9+ credits per semester) and four to five years if you are a part-time student (3-6 credits per semester). Summer courses are not required, but are offered on a very limited basis. A thesis is not required to complete the degree, but you can complete a significant capstone project (ENGR 597).

Systems Engineering is a specialization of the College of Engineering Master of Engineering degree, therefore the Systems Engineering title only appears on the student’s transcript and not on the final diploma.

**Program of Study**

1) Minimum of 30 semester credits of graduate work in approved course of study
2) Minimum of 24 credits semester credits earned at Colorado State (21 while in graduate program).
3) No more than two courses at the 400 level taken at Colorado State University are permitted. No more than two 500 (graduate) level courses may be transferred from another accredited University. Courses are intended to be taken in progression; core courses first, then courses in depth (choose 3 from a list of Systems courses), followed by electives and culminating in the Group Study.

**Program Course Requirements**

**Core Courses – 12 credits**
ENGR 501 (3 cr.) Foundations of Systems Engineering
ENGR 530 (3 cr.) Overview of Systems Engineering Processes
ENGR 531 (3 cr.) Engineering Risk Analysis
One from:
   ENGR 502 (3 cr.) Project and Program Management (previously MECH 501)
   CIS 600 (3 cr.) Information Technology and Project Management
   CIS 670 (3 cr.) Advanced IT Project Management

**Courses in Depth – Select 9 credits**
ENGR 510 (3 cr.) Engineering Optimization: Method/Application
ENGR 520 (3 cr.) Engineering Decision Support/Expert Systems
ENGR 532 (3 cr.) Dynamics of Complex Engineering Systems
ENGR/ECE 565 (3 cr.) Electrical Power Engineering
ENGR 567 (3 cr.) Systems Engineering Architecture
CIS 610 (3 cr.) Software Development Methodology
MECH 513 (3 cr.) Simulation Modeling and Experimentation

**Electives – Select 6 credits**
Courses consistent with the student’s program of study and professional goals. A suggested elective list is available on the Systems Engineering website; any courses not on the list must be approved by the SE Program. Please contact sys_engr_info@engr.colostate.edu for questions.

**Group Study – 3 credits**
ENGR 597 (3 cr.) Group Study (must have project faculty advisor before enrolling)
   OR another elective 500 level or above

*Courses in new subjects may be offered on an experimental basis, and can apply to the degree.

Important Steps in Detail

You may access instructions and forms on the Graduate School website: [http://graduateschool.colostate.edu/policies-and-procedures/forms/](http://graduateschool.colostate.edu/policies-and-procedures/forms/)

Advisor
For the M.E. program, 1 advisor is required. The Systems Engineering Program Director, Ron Sega, should be listed as the advisor on the GS6 form. This form must be filed with the Graduate School as outlined below.

GS6 Form
The GS6 is intended to draft all courses (taken, in-progress, or expected) that will fulfill program requirements and to finalize the student’s advisory committee. It is required before registration for the fourth regular semester in the program. Students will work with the Systems Engineering graduate advisor to lay out a proposed plan of study and list of committee members before submitting the GS6 to the Graduate School. For more information, please see section “GS6” under the “Graduate School Standards” section above.

GS25 Form
The GS25 Application for Graduation must be submitted to the Graduate School in the first six weeks of the semester in which you plan to graduate. You must be enrolled in credit-bearing courses or CR during your graduation semester. For more information, please see section “GS25” under the “Graduate School Standards” section above.

Transfer Credit
For the Master of Engineering degree, a minimum of 24 credits must be earned at Colorado State University, 21 of which must be earned after admission to the Graduate School. No more than 6 credits from an institution other than Colorado State may be applied toward the M.E. degree. Credits may be accepted for transfer provided all Graduate School requirements are met, including:

- The credit was earned at a regionally-accredited institution (credit earned at institutions outside of the U.S. may require additional documentation)
- The course(s) must have a B or higher earned ('B-' is not accepted)
- It must be a ‘regular’ course (meaning it cannot be a seminar, special topic, independent study, research credit, or similar)
- It must not have been used toward any previous awarded degree
- It must be 500-level equivalent or higher
- It must be approved by your faculty advisor and the S.E. Program as relevant to your program of study
- There is a 10-year time requirement on individual courses counting toward any graduate degree. If a transfer course will be at least 10 years old at the time the student applies to graduate, it may not
count toward your degree. Students petitioning for acceptance of transfer credit must submit a syllabus of the course(s) taken to the S.E. program advisor and an official transcript showing the course(s) must be on-file when the GS6 is submitted so that an effective evaluation can be made. Please note that grades in courses accepted for transfer will not be included in calculation of the grade point average.
Master of Science
http://www.engr.colostate.edu/se/master-of-science/

Graduates of our Master of Science program will be capable of designing and managing complex multidisciplinary engineering systems, with a rigorous systems engineering approach. The research component of the thesis- and project-based M.S. programs equip students with cutting edge skills in specific focus areas, preparing them for future career opportunities.

You can expect the Master of Science program to take one to two years as a full-time student (9+ credits per semester) and four to five years if you are a part-time student (3-6 credits per semester). Summer courses are not required, but are offered on a very limited basis.

Program of Study

Master of Science

Plan A requires a thesis and completion of a minimum of 30 credits. Of this 30, 21 credits must be in regular course work other than independent study or research. No more than 6 credits are allowed at the 400 level. The remaining credits must be 500 level or above. This plan involves a final examination as described below (see the “Final Examination” section).

Plan B requires 27 credits of regular courses (other than independent study) and 3 credits of independent study with the submission of a report. No more than 6 credits are allowed at the 400 level. The remaining credits must be 500 level or above. This plan involves a final examination as described below (see the “Final Examination” section).

Student who enter as Plan B students have the option to change to Plan A if, during their time in the program, they find a faculty member that agrees to be their thesis faculty advisor.

Program Course Requirements

Plan A – Thesis Required

Systems Engineering Courses - 15 credits*
Select 5 courses from the following:
ENGR 501 (3 cr.) Foundations of Systems Engineering
ENGR 502 (3 cr.) Project and Program Management (previously MECH 501)
   or CIS 600 (3 cr.) Information Technology and Project Management
   or CIS 670 (3 cr.) Advanced IT Project Management
ENGR 530 (3 cr.) Overview of Systems Engineering Processes
ENGR 531 (3 cr.) Engineering Risk Analysis
ENGR 532 (3 cr.) Dynamics of Complex Engineering Systems
ENGR/ECE 565 (3 cr.) Electrical Power Engineering
ENGR/ECE 566 (3 cr.) Energy Conversion for Electrical Power Systems
ENGR 567 (3 cr.) Systems Engineering Architecture
ENGR 510 (3 cr.) Engineering Optimization: Method/Application
ENGR 520 (3 cr.) Engineering Decision Support/Expert Systems
MECH 513 (3 cr.) Simulation Modeling and Experimentation

Technical Electives - 6 credits*
Courses consistent with the student’s program of study and professional goals. A suggested elective list is available on the Systems Engineering website; any courses not on the list must be approved by the SE Program. Please contact sys_engr_info@engr.colostate.edu for questions.

Research - 9 credits
ENGR 699: Thesis

Plan B – Project Option
Systems Engineering Courses - 15 credits*
Select 5 courses from the following:
- ENGR 501 (3 cr.) Foundations of Systems Engineering
- ENGR 502 (3 cr.) Project and Program Management (previously MECH 501)
  or CIS 600 (3 cr.) Information Technology and Project Management
  or CIS 670 (3 cr.) Advanced IT Project Management
- ENGR 530 (3 cr.) Overview of Systems Engineering Processes
- ENGR 531 (3 cr.) Engineering Risk Analysis
- ENGR 532 (3 cr.) Dynamics of Complex Engineering Systems
- ENGR/ECE 565 (3 cr.) Electrical Power Engineering

### Important Steps in Detail
You may access instructions and forms on the Graduate School website: [http://graduateschool.colostate.edu/policies-and-procedures/forms/](http://graduateschool.colostate.edu/policies-and-procedures/forms/)

### Advisor and Advisory Committee
An M.S. Plan A student must have a primary faculty advisor before beginning the program; Plan B students have a predetermined committee provided for them. The Plan A advisor must hold academic faculty rank as a professor, associate professor, or assistant professor of any appointment type within the Systems
Engineering program. Faculty considered to be within the program are those found on the Associated Faculty List, found at: [http://www.engr.colostate.edu/se/people/associated-faculty/](http://www.engr.colostate.edu/se/people/associated-faculty/).

An M.S. advisory committee consists of at least three faculty members. This committee is formalized by completion of the GS6 form as outlined below. Industrial participation is encouraged if appropriate; however, only formal committee members may vote at the final examination.

The committee is comprised of the following members:

1. The faculty advisor who serves as chairperson of the committee that meets the following criteria:
   - They must hold academic faculty rank as a professor, associate professor, or assistant professor of any appointment type within the department or program granting the degree
   - They must be on the list of Systems Engineering Associated Faculty;
2. One or more additional members from the list of Systems Engineering Associated Faculty;
3. One outside member that meets the following criteria:
   - They must hold a regular, special, transitional, joint, or emeritus/emerita faculty appointment at CSU in a department other than that of the advisor
   - They must not be on the list of Systems Engineering Associated Faculty
4. (Optional) Additional members from any department may be added

Because the ‘outside member’ should serve as an impartial external evaluator on the committee, it is best to avoid situations where the outside member has association with the advisor’s department (i.e. joint appointments). If potential conflicts of interest arise, they should be disclosed to the Dean of the Graduate School as soon as possible.

M.S. Plan A students are responsible for locating and gaining committee member approval before listing them on their GS6. Many Plan A students work with their faculty advisor to plan this committee.

M.S. Plan B students will list the following committee on their GS6:
Advisor: Ron Sega
Committee Member: Thomas Bradley
Outside Committee Member: Anthony Marchese

**GS6 Form**
The GS6 is intended to draft all courses (taken, in-progress, or expected) that will fulfill program requirements and to finalize the student’s advisory committee. It is required before registration for the fourth regular semester in the program. Students will work with the Systems Engineering graduate advisor to lay out a proposed plan of study and list of committee members before submitting the GS6 to the Graduate School. For more information, please see section “GS6” under the “Graduate School Standards” section above.

**GS25 Form**
The GS25 Application for Graduation must be submitted to the Graduate School in the first six weeks of the semester in which you plan to graduate. You must be enrolled in credit-bearing courses or CR during your graduation semester. For more information, please see section “GS25” under the “Graduate School Standards” section above.

**Examinations**

**Plan A:** The examination will be an oral defense of the M.S. thesis.

This is the final evaluation of the student’s research activity; see below for M.S. Thesis Guidelines. The thesis must be submitted to the student’s committee no less than 14 days before the defense date.

The report of the results of the final examination must be submitted to the Graduate School on GS Form 24 by the student within two working days of knowing the results of the exam.
All examinations are held on the Colorado State University campus or via appropriate video-teleconferencing (vtc) equipment and software. The exam should be scheduled ideally one month, but no less than two weeks, before the exam is to be held. It is the student's responsibility to coordinate a time/place with his/her committee members.

Contact sys_engr_info@engr.colostate.edu for logistical information. Exams may be open-attendance for the University community and announcement of all exams is made on the Systems Engineering website.

Plan B (with Independent Study):
Students in the Plan B option will work with the program to fulfill the requirements of their final examination. Upon completion of the final examination it is the student’s responsibility to submit the GS Form 24 (Report of Final Examination Results) to the Graduate School. This form must be received in the Graduate School within two working days after the examination results are known.

Thesis Submission (Plan A only)
The GS30 Thesis/Dissertation Submission Form is signed by the members of your committee when your thesis is approved and ready for electronic submission. Forms must be submitted to the Graduate School by the deadline date of the semester that you intend to complete your degree requirements.

Once your thesis is approved you will submit it electronically to ProQuest/UMI. Please see Graduate School website for details. Note that you must follow Graduate School formatting requirements and gain approval before your final thesis is submitted. Leave time for the thesis format to be approved by the Graduate School before the final submission deadline listed.

Transfer Credit
For the Master of Science degree, a minimum of 24 credits must be earned at Colorado State University, 21 of which must be earned after admission to the Graduate School. No more than 6 credits from an institution other than Colorado State may be applied toward the M.S. degree. Credits may be accepted in transfer provided all Graduate School requirements are met, including:

- The credit was earned at a regionally-accredited institution (credit earned at institutions outside of the U.S. may require additional documentation)
- The course(s) must have a B or higher earned (‘B-’ is not accepted)
- It must be a ‘regular’ course (meaning it cannot be a seminar, special topic, independent study, research credit, or similar)
- It must not have been used toward any previous awarded degree
- It must be 500-level equivalent or higher
- It must be approved by your faculty advisor and the S.E. Program as relevant to your program of study
- There is a 10-year time requirement on individual courses counting toward any graduate degree. If a transfer course will be at least 10 years old at the time the student applies to graduate, it may not count toward your degree.

Students petitioning for acceptance of transfer credit must submit a syllabus of the course(s) taken to the S.E. program advisor and an official transcript showing the course(s) must be on-file when the GS6 is submitted so that an effective evaluation can be made. Please note that grades in courses accepted for transfer will not be included in calculation of the grade point average.

M.S. Plan A Thesis Guidelines
SE adopted the following Master’s Thesis format to facilitate a concise, clear, well-written document that is more easily transformed into a publishable manuscript. In addition, all master's degree students should consult the CSU Graduate School’s Thesis and Dissertation Formatting Guide for thesis development.

The thesis should contain the following sections:
1. Title page, copyright page, abstract, and table of contents per the Graduate School’s Thesis and Dissertation Formatting Guide
2. Introduction. This section should include a presentation of referenced literature necessary to support the rationale, purpose, and understanding of the study. Do not provide an exhaustive, historical review of the literature.

3. Experimental Section. This section should concisely and clearly explain the methods and materials used so that others can repeat your work. If an explanation of detailed operating procedures or processes is required to explain the method, provide those details in an Appendix at the end of the thesis.

4. Results. The results should be presented, and as necessary, with tables, illustrations, and/or graphs. The style and format of tables, illustrations, and graphs should adhere to the Graduate School Thesis and Dissertation Formatting Guide. Consideration should also be given to the format suggested by the journal to which the manuscript will be submitted.

5. Discussion. This section should address whether or not the study results supported the hypothesis and why. A comparison of the study results to other published studies, supporting or negating, should be presented as well as how the results contribute to the body of knowledge. The student’s interpretation/opinion regarding the results can be presented in this section. Last, a detailed presentation of the study strengths and limitations should be included.

6. Conclusions and Future Work. Concisely state the conclusions based on the study results/discussion. Identify future work that should be accomplished to further address the area of study.

7. References. The citation and bibliography format should follow the format suggested by the journal to which the manuscript will be submitted, provided that this format also adheres to the Graduate School Thesis and Dissertation Formatting Guide. When in doubt, always follow the Graduate School Thesis and Dissertation Formatting Guide.

8. Appendices. Include any appendices necessary to detail methods/materials used (e.g., procedures and questionnaires).
Doctor of Philosophy
http://www.engr.colostate.edu/se/phd-curriculum/

The Ph.D. prepares students to become leaders in systems engineering. Throughout the program, students produce significant academic and industry contributions in terms of original research to the field, driving advancements and leading to improvements in energy efficiency, environmental impact, cybersecurity, and economic growth, among other areas of application for systems engineering.

Please see Appendix A for more detailed information on the purpose and goals of the PhD process, preliminary exam, and final exams.

Program of Study

If an appropriate technical master’s degree has been successfully completed there is the possibility that up to 30 hours of that degree could be counted toward the 72 credit hour requirement for the Ph.D. The process to determine if your Master’s can count toward the Ph.D. is as follows:

1. Your faculty advisor must agree that your Master’s is considered applicable to your Systems Engineering Ph.D. program of study.
2. If your advisor agrees, you will submit the Master’s degree as part of your Program of Study (GS6) in the second or third semester of classes at CSU. The GS6 is required to be submitted to the Graduate School before you can register for your fourth semester. If your master’s degree is from an institution outside of the U.S., additional documentation may be required.
3. The Graduate School has final say if the master’s degree credits are transferrable. Upon the approval of your GS6 Program of Study, up to 30 credits from your master’s degree will be finalized into your degree plan.

For the 42-credit option, a minimum of 32 credits must be earned at Colorado State University after admission to a doctoral program. A minimum of 21 semester credits is required beyond the M.S. level. Courses at the 400 level and below will not be accepted towards the 42-credit Ph.D.

Students who have not yet received a master’s degree may be admitted to the 72-credit Ph.D. program and will be required to meet the “Program of Study” requirements for both the Ph.D. and M.S. programs. This includes 39 credits of regular graduate course work other than independent study and research. No more than 6 of these credits are allowed at the 400 level. The remaining 33 credits are in dissertation/research.

Program Course Requirements

42 Credit Ph.D.

Systems Engineering Courses - 18 credits*
Choose 6 courses from the following:

- ENGR 501 (3 cr.) Foundations of Systems Engineering
- ENGR 502 (3 cr.) Project and Program Management (previously MECH 501)
  - or CIS 600 (3 cr.) Information Technology and Project Management
  - or CIS 670 (3 cr.) Advanced IT Project Management
- ENGR 530 (3 cr.) Overview of Systems Engineering Processes
- ENGR 531 (3 cr.) Engineering Risk Analysis
- ENGR 532 (3 cr.) Dynamics of Complex Engineering Systems
- ENGR/ECE 565 (3 cr.) Electrical Power Engineering
- ENGR/ECE 566 (3 cr.) Energy Conversion for Electrical Power Systems
- ENGR 567 (3 cr.) Systems Engineering Architecture
- ENGR 510 (3 cr.) Engineering Optimization: Method/Application
- ENGR 520 (3 cr.) Engineering Decision Support/Expert Systems
- MECH 513 (3 cr.) Simulation Modeling and Experimentation

Research - 24 credits
ENGR 799: Dissertation

- Please note the 42-credit Ph.D. option does not include space for electives -
72 Credit Ph.D.

**Systems Engineering Courses - 21 credits**
Choose 7 courses from the following:

- ENGR 501 (3 cr.) Foundations of Systems Engineering
- ENGR 502 (3 cr.) Project and Program Management (previously MECH 501)
  or CIS 600 (3 cr.) Information Technology and Project Management
  or CIS 670 (3 cr.) Advanced IT Project Management
- ENGR 530 (3 cr.) Overview of Systems Engineering Processes
- ENGR 531 (3 cr.) Engineering Risk Analysis
- ENGR 532 (3 cr.) Dynamics of Complex Engineering Systems
- ENGR/ECE 565 (3 cr.) Electrical Power Engineering
- ENGR/ECE 566 (3 cr.) Energy Conversion for Electrical Power Systems
- ENGR 567 (3 cr.) Systems Engineering Architecture
- ENGR 510 (3 cr.) Engineering Optimization: Method/Application
- ENGR 520 (3 cr.) Engineering Decision Support/Expert Systems
- MECH 513 (3 cr.) Simulation Modeling and Experimentation

**Technical Electives - 18 credits**
Courses consistent with the student’s program of study and professional goals. A suggested elective list is available on the Systems Engineering website; any courses not on the list must be approved by the SE Program. Please contact sys_engr_info@engr.colostate.edu for questions.

**Research - 33 credits**
ENGR 799: Dissertation

*Courses in new subjects may be offered on an experimental basis, and can apply to the degree.

For both the 42-credit option and the 72-credit option, three credit hours of ENGR 795 (Independent Study) may be used towards the total of dissertation credits OR as one 3-credit course. If you have had your Ph.D. research, which was performed while enrolled at CSU, accepted for publication (completely or with minor revisions) in at least two peer-reviewed journal or conference proceedings, then you may be able to receive Independent Study credit. You must be first author on at least one of the papers accepted. Please work with your faculty advisor when planning publications to meet this requirement. To receive this credit, you will complete an ENGR 795 Independent Study form, with faculty advisor approval, and submit to the Systems Engineering Program.

Important Steps in Detail
You may access instructions and forms on the Graduate School website:
http://graduateschool.colostate.edu/policies-and-procedures/forms/

Advisor and Advisory Committee
A Ph.D. student must have a primary faculty advisor before beginning the program. The advisor must hold academic faculty rank as a professor, associate professor, or assistant professor of any appointment type within the Systems Engineering program. Faculty considered to be within the program are those found on the Associated Faculty List, found at: http://www.engr.colostate.edu/se/people/associated-faculty/. Faculty not currently on the list may be added if a student has found an advisor not previously associated with Systems Engineering who agrees to advise a Systems Engineering student.

A Ph.D. graduate committee consists of at least four academic faculty members. This committee is formalized by completion of the GS6 form as outlined below. The makeup of a graduate committee must be agreed to by the potential members themselves, and it is the student’s responsibility to secure these agreements before submitting their GS6. It is recommended that a student’s committee have several members with expertise in his/her proposed research field. Industrial participation is encouraged if appropriate; however, only formal committee members may vote at the final examination.

The committee is comprised of the following members:
1. The faculty advisor who serves as chairperson of the committee that meets the following criteria:
   a. They must hold academic faculty rank as a professor, associate professor, or assistant professor of any appointment type within the department or program granting the degree
   b. They must be on the list of Systems Engineering Associated Faculty;
2. One or more additional members from the department;
3. Any non-departmental faculty member who may be appropriate; and
4. One outside member that meets the following criteria:
   a. They must hold a regular, special, transitional, joint, or emeritus/emerita faculty appointment at CSU in a department other than that of the advisor
   b. They must not be on the list of Systems Engineering Associated Faculty

Because the outside member should serve as an impartial external evaluator on the committee, it is best to avoid situations where the outside member has association with the advisor’s department (i.e. joint appointments). If potential conflicts of interest arise, they should be disclosed to the Dean of the Graduate School as soon as possible.

You may review the Graduate and Professional Bulletin for more information:
http://catalog.colostate.edu/general-catalog/graduate-bulletin/graduate-study/procedures-requirements-all-degrees/#advisory-system

Ph.D. Qualifying Process
Every Ph.D. student must pass all course requirements with a “B” or higher (“B-” and below not accepted). If a student does not achieve this grade, they will be given one opportunity to repeat the course.

Annual Evaluation Process
Each fall, every PhD student must complete an Annual Evaluation form and meet with their faculty advisor to have a discussion regarding their progress over the last year and goals for the future. Following each discussion, the student will submit the completed Annual Evaluation form to the Systems Engineering Program as part of their progression portfolio. Students who do not submit this evaluation by the December 1 deadline each year will have a registration hold placed on their account until it is submitted.

GS6 Form
The GS6 is intended to draft all courses (taken, in-progress, or expected) that will fulfill program requirements and to finalize the student’s advisory committee. It is required before registration for the fourth regular semester in the program. Ph.D. students should work with their faculty advisors to lay out a proposed Program of Study. Students and their advisors will coordinate with the Systems Engineering program advisor to formalize the GS6 Program of Study, ensure that Systems Engineering program
requirements are being met, and verify appropriate committee members are listed before the GS6 is submitted to the Graduate School. It is the student’s responsibility to ensure faculty members agree to serve on their committee before submitting their GS6. For more information, please see section “GS6” under the “Graduate School Standards” section above.

Please note that if you are submitting a master’s degree or transfer courses from an institution outside of the U.S., additional documentation may be required.

Ph.D. Preliminary Examination
This exam will provide the student’s PhD committee an opportunity to examine his/her planned research activity, determine the student’s knowledge of the fundamental scientific and engineering principles involved with their dissertation topic, and to determine the adequacy of the current research plan to develop a satisfactory dissertation. The Preliminary Exam must be taken at least two semesters before the Final Exam/Dissertation Defense, and is generally taken after the student has completed some ENGR 799 credits and has a grasp of their intended project. The student has a maximum of two opportunities to pass the preliminary exam.

Please see Appendix A for more detailed information on the purpose and goals of the PhD process, preliminary exam, and final exams.

All examinations are held on the Colorado State University campus or via appropriate video-teleconferencing (vtc) equipment and software. The exam should be scheduled ideally one month, but no less than two weeks, before the exam is to be held. It is the student’s responsibility to coordinate a time/place with his/her committee members. Please contact sys engr_info@engr.colostate.edu for questions or help with logistical information. Announcement of all exams is made on the Systems Engineering website.

Students should work with their faculty advisor and committee members to understand the deliverables required. The student must at a minimum provide a written report or presentation of background, significance and theoretical basis of the planned research, the experimental design, and any preliminary data. All deliverables required by the faculty advisor and committee should be sent to the full committee no less than 10 business days before the student’s Preliminary Examination. The exam will involve a 30-45 minute presentation by the student, followed by an oral examination from the student’s PhD committee. Based on the examination results, the student’s committee will recommend one of the following courses of action:

(A) That he/she be endorsed as a Ph.D. candidate,
(B) That he/she submit to another preliminary examination no sooner than 2 months and no later than 12 months after the first exam, or
(C) That he/she withdraw from the Ph.D. program.

A report of the results of the preliminary examination (GS16) must be submitted to the Graduate School by the student within two working days of knowing the results of the exam. It is the student’s responsibility to ensure this paperwork is completed on time.

GS25 Form
The GS25 Application for Graduation must be submitted to the Graduate School in the first six weeks of the semester in which you plan to graduate. You must be enrolled in credit-bearing courses or CR during your graduation semester. For more information, please see section “GS25” under the “Graduate School Standards” section above.

Ph.D. Final Examination/Dissertation Defense
The Ph.D. dissertation is a major effort in which the doctoral candidate undertakes a program of work that will result in a significant contribution to the student’s major field of study. This exam is the final evaluation of the student’s research activity and must be taken at least two semesters after the Preliminary Exam. The dissertation and any other supporting materials (if required by advisor or committee) must be submitted to the full advisory committee no less than 10 business days before the defense date.

All examinations are held on the Colorado State University campus or via appropriate video-teleconferencing (vtc) equipment and software. The exam should be scheduled ideally one month, but no less than two weeks, before the exam is to be held. It is the student’s responsibility to coordinate a time/place
with his/her committee members. Please contact sys_engr_info@engr.colostate.edu for questions or help with logistical information. Exams may be open-attendance for the University community and announcement of all exams is made on the Systems Engineering website.

In addition, the following metrics will also be used to assess student learning and professional development:

- Research presentations at national and international conferences.
- Evaluation scores from the preliminary exam that includes scoring on the following sections: background, significance and theoretical basis of the planned research, the experimental design, and any preliminary data.

The report of the results of the final examination (GS24) must be submitted to the Graduate School by the student within two working days of knowing the results of the exam. It is the student’s responsibility to ensure this paperwork is completed on time.

**Dissertation Submission**

The GS30 Thesis/Dissertation Submission Form is signed by the members of your committee when your dissertation is approved and ready for electronic submission. Ph.D. students must also submit a Survey of Earned Doctorates (SED) Certificate with the GS30 (steps for the SED can be found on the Graduate School website). Forms must be submitted to the Graduate School by the deadline date of the semester that you intend to complete your degree requirements.

Once your dissertation is approved you will submit it electronically to ProQuest/UMI. Please see Graduate School website for details. Note that you must follow Graduate School formatting requirements and gain approval before your final dissertation is submitted. **Leave time for the dissertation format to be approved by the Graduate School before the final submission deadline listed.**

**Transfer Credit**

A minimum of 32 credits must be earned at CSU after admission to the 42-credit doctoral program (for those with an applicable master’s degree) or a minimum of 62 credits must be earned at CSU after admission to the 72-credit doctoral program (for those without an applicable master’s degree).

For Ph.D. students, up to 10 credits in courses earned after the date on which the master’s degree was awarded may be accepted in transfer provided all Graduate School requirements are met, including:

- The credit was earned at a regionally-accredited institution (credit earned at institutions outside of the U.S. may require additional documentation)
- The course(s) must have a B or higher earned (‘B-‘ is not accepted)
- It must be a ‘regular’ course (meaning it cannot be a seminar, special topic, independent study, research credit, or similar)
- It must not have been used toward any previous awarded degree
- It must be 500-level equivalent or higher
- It must be approved by your faculty advisor and the S.E. Program as relevant to your program of study
- There is a 10-year time requirement on individual courses counting toward any graduate degree. If a transfer course will be at least 10 years old at the time the student applies to graduate, it may not count toward your degree.

Students petitioning for acceptance of transfer credit must submit a **syllabus** of the course(s) taken to the S.E. program advisor and an **official transcript** showing the course(s) must be on-file when the GS6 is submitted so that an effective evaluation can be made. Please note that grades in courses accepted for transfer will not be included in calculation of the grade point average.
Graduate Student Responsibilities

Graduate students are responsible for knowing any special expectations and requirements of their program and are expected to remain in good academic standing by making satisfactory degree progress and must at all times have an advisor. In the event that an advisor resigns from that position, it is the student's responsibility to obtain a replacement.

Students judged to be making unsatisfactory progress toward a degree or whose work is not of the quality expected by the student’s advisor and/or graduate committee may be recommended for academic probation or immediate dismissal from the graduate program (see "Scholastic Standards" in the Graduate and Professional Bulletin) and/or termination of assistantship (see "Assistantships" in the Graduate and Professional Bulletin).

The Dean of the Graduate School will be informed of students who are making unsatisfactory progress.

With regard to meeting graduate school deadlines, ultimate responsibility for a graduate student’s program lies with the student. The graduate student’s advisor, committee, the graduate school office, and the Systems Engineering program office are all available to help and advise. Several deadlines are critical; for example, failure to file the GS Form 6 before the end of the third semester will prevent the student from registering for further courses. Each semester the Graduate School publishes a list of deadlines which must be met in order to graduate during that term. It is also important that the graduate student provide his/her committee with ample time (at least 2 weeks) to read the student’s thesis or dissertation before the final examination.

CSU Student Conduct Code

The Student Conduct Code (https://resolutioncenter.colostate.edu/conduct-code/) exists to notify students, faculty, and staff of the specific expectations Colorado State University holds related to student behavior and the rights and responsibilities that accompany being a student and participating in student clubs or organizations.

Graduate Student Appeals Procedure

Graduate students may appeal decisions concerning unsatisfactory performance on graduate preliminary or final examinations, academic probation for reasons of unsatisfactory progress toward the degree other than insufficient grade point average, termination of an assistantship for reasons of unsatisfactory performance, or dismissal from the graduate program.

- The Dean of the Graduate School and the Judicial Affairs Officer shall examine the appeal and determine whether the actions are disciplinary or academic.
- If deemed to be disciplinary, the Dean of the Graduate School shall refer the complainant to the University Discipline Process.
- If deemed to be an academic matter other than a grading decision, the Dean of the Graduate School shall implement the Appeals Procedures as outlined below:
  - A review panel, composed of two faculty members and a graduate student, will be appointed;
  - The Review Panel will consider the case in detail;
  - The Panel will make appropriate recommendations to the Dean of the Graduate School;
  - The Dean of the Graduate School and the dean of the college involved shall jointly review the case;
  - Following consultation with the Provost/Academic Vice President, the Dean of the Graduate school shall make the final decision.

Graduate Student Representation

The Graduate Student Council represents and advocates for Colorado State University graduate and professional students within CSU and beyond. The goal of the council is to improve the experience of graduate education at CSU, through:

- Representing graduate and professional students within the Associated Students of CSU (ASCSU), the campus-wide student government,
• Representing graduate and professional students on committees of Faculty Council, boards overseeing student fee areas, and other university committees,
• Advocating for the concerns of graduate and professional students beyond the university, to the state legislature and other bodies,
• Spending fee money allocated to the Graduate Student Council by ASCSU and other entities for the benefit of graduate students,
• Building relationships with university administrators to advocate for changes to policies, procedures, and programs that benefit graduate and professional students,
• Bringing students from diverse graduate and professional programs together for the purposes of networking, collaboration, and advocacy on issues of common concern.

How to become involved:
• Attend the next GSC regular meeting – they usually meet once each month during the semester, on the first Monday.
• Represent the department or program - being a representative for a department doesn’t require a heavy time commitment -- just attending monthly GSC meetings and being generally available as a conduit for students in this program to communicate with the GSC. Are we represented?
• Represent graduate and professional students on a university committee - committees on which grad students get a vote do everything from approve academic standards to deciding how student fee money is spent; serve as a representative or alternate to a committee that interests you.
• Join one of the GSC’s email discussion groups where students are working together on issues affecting grad students:
  • Academics discussion group
  • Health Insurance discussion group
  • Legislative lobbying discussion group
  • Email your suggestions to the GSC President
Appendix A

**Systems Engineering PhD Process**

*The goals and content of the PhD process in Systems Engineering*
*Thomas H. Bradley,* Associate Professor of Mechanical Engineering, Associate Director of Systems Engineering

Systems Engineering (SysEng) is a discipline of Engineering which develops an inter-disciplinary and systems-level viewpoint to enable the research and design of large-scale, complex, socio-technical systems. SysEng scholarship requires interdisciplinary training in disciplines as diverse as engineering, management, organizational sociology, behavioral economics, information theory, statistics, and computing. A core strength of the SysEng program at CSU is that it is implemented as an interdisciplinary graduate program where faculty from various disciplines and departments advise SysEng graduate students towards a SysEng graduate degree. This document seeks to develop and communicate a common understanding of the goals of each aspect of the SysEng PhD graduate program so that faculty and students can work to achieve these goals.

Graduate research training for the PhD in SysEng consists of three primary activities: (1) coursework, (2) completion of the preliminary examination, and (3) completion of the dissertation. Each of these student-led activities should be advised and monitored by the faculty advisor and the dissertation advising committee.

Each fall semester before Dec. 1, *every* PhD student must meet with their faculty advisor and have a discussion regarding their progress over the last year (this is the PhD Student Annual Evaluation). Following each discussion, the student will submit the completed Annual Evaluation form to the Systems Engineering program as part of a progression portfolio.

(1) **Qualifying Process (Coursework):**

The goals of the coursework activity are to develop the student’s skillset in SysEngr, to develop the student’s analytical, evaluation, and creative mindset, and to instill a Systems Thinking capability. Mastering the SysEng body of knowledge involves mastering subjects with various multi-disciplinary content.

In CSU’s SE curriculum, the student is expected to develop deep expertise in technical and mathematical subjects (defined in the INCOSE SE Handbook as technical processes), as well as in qualitative analysis and soft-skills (defined in the INCOSE SE Handbook as project, enterprise, and agreement processes). While foundational SysEngr courses are broad in disciplinary scope, later courses build the depth and quality of the student’s skillset in core SysEng disciplines. Throughout the curriculum, the courses emphasize aspects of Systems Thinking including feedback, design, emergence, mental models, uncertainty, learning systems and more.

PhD students are required to earn no less than a grade of “B” in their coursework to pass the Qualifying Process (B- and below are not accepted toward the degree). If a student does not earn at least a B, they will be given one opportunity to repeat the course.

(2) **Completion of the Preliminary Examination:**

The next stage of research education at the PhD graduate level is preparation for and completion of the preliminary examination. Preparation for this examination includes advising tasks that would include development of in-depth learning and recall (for example, publication of literature review, verification of
previous work), but also one-on-one and group mentorship (for example, research advising, lab group meetings, conference attendance), and the development of students’ intrinsic motivation for research tasks (for example, publication, and presentation at conferences). The form of the preliminary examination (whether presented in a dissertation draft form, presentation form, NSF-type proposal form, etc.) is up to the advisor. The objective of the preliminary examination is to evaluate the student’s research readiness in terms of:

- **Student’s depth of knowledge within the specifics of their research topic.** Students should document and defend their understanding of the fundamentals and context of the field in which their research is sited. In engineering research, the research effort must be referenced to the current actors, processes, and engineering practice in human-designed systems.

- **The scholarly value and intellectual rigor of their research objectives, research questions, and proposed findings.** Students must demonstrate philosophically disciplined and logical thinking in their development of the research topic. The components of the research topic must be logically connected, and the hypothesized outcomes of the research effort must be complementary to the development of new knowledge.

- **The scope and timeline of the proposed research effort.** The student must demonstrate their understanding of their research process by presenting their work-to-date, proposed tasks, resource requirements (including data, funding, equipment, support personnel), and timeline. During the period of the examination, the committee and student should come to a shared understanding of the remaining and required content for the dissertation. This should lead to a consensus on the scope, task content, remaining tasks, and proposed timeline.

**(3) Completion and defense of the dissertation:**

In preparation to defend the dissertation, the student should compose a dissertation document (aligned with the formatting of the CSU Graduate College, and the content guidelines of the advisor), and a defense presentation. The goals of the completion and defense of the dissertation is that the student:

- **Demonstrate a great breadth and depth of knowledge in their field of research.** The student must again describe their research context, and must be able to defend their processes and conclusions in the context of new developments or reasoned challenges from within or outside their field.

- **Demonstrate a philosophically consistent and logical approach to the development of new knowledge.** The student should describe the model of knowledge generation (scientific method, hypothesis testing, observation, critique, etc.) that they have used to develop the new knowledge asserted in their dissertation. This method of knowledge generation should be consistent and justified throughout a particular research effort.

- **Demonstrate a significant and recognized scholarly achievement.** The student must justify the results of the dissertation research effort as a significant and recognized unit of scholarship. The dissertation research effort must represent a significant contribution to the field, and should be recognized by the dissertation advising committee as an increment in new knowledge. Although the justification can take different forms for dissertations that include controlled information, in general, the student must author, guide through peer review, and publish the research results of the dissertation multiple times as they move through the dissertation research process.

- **Demonstrate the utility and continued value of this knowledge to the field of Systems Engineering.** Research in Systems Engineering seeks to inform and advance the practice of Systems Engineering. The value of the research results of a dissertation must be placed into the context of the practice.

**Concluding Statement**

The program will place these goals and activities for the PhD in SysEng into the website and graduate handbook for faculty, student, and public discourse and revision.

Appendix C

Application Packet

Last Updated December 2017

Dear Applicant,

We are pleased to learn of your interest in Colorado State University’s Systems Engineering degree programs. We offer a Certificate in S.E. Practice, Master of Engineering (M.E.), Master of Science (M.S.), and a Doctor of Philosophy (Ph.D.) degree. The M.E. includes a capstone project. There are two options for students pursuing the M.S. - a thesis or project. Additionally, there are two options for students pursuing the Ph.D. depending on prior master degrees. Please carefully read all of the materials in the packet and fully follow the instructions and deadlines when applying.

Students are admitted to the program twice per year. For the fall semester, the deadline to submit all materials is July 1. For the spring semester, the deadline is November 1. Upon receipt of all application materials, your application is reviewed by the admissions committee and an admissions recommendation is generally made to the Graduate School within one week. The applicant is notified if they are recommended for admission. Once the Graduate School has received this recommendation, it can take up to four weeks, but usually less time, before you receive official notification of the Graduate School’s formal admission decision.

Common mistakes to avoid in the application process:
1. Not reading all materials prior to beginning the application process. Failure to follow specified directions may lead to an incomplete and/or rejected application.
2. Not leaving enough time to have all required materials at CSU before the deadline arrives.
3. Not checking written materials for errors.
5. Not checking your application status to see that all materials are in prior to the deadline.
6. Not securing a faculty advisor prior to applying (for M.S. Plan A and Ph.D. programs)

We look forward to receiving your application materials and wish you well in your professional development.

Sincerely,
The Colorado State University Systems Engineering Program
Systems Engineering Program Options

Systems Engineering offers one certificate and three degrees with various options:

**Graduate Certificate in Systems Engineering Practice**
- Requires 12 credits of Systems Engineering core courses, all of which must be earned at Colorado State University. There are no course waivers or substitutions for certificates.

**Master of Engineering (M.E.)**
- The M.E. can include a capstone project. The topic of the capstone project is determined by the student and the faculty advisor.
- No independent study, research, internship, supervised college teaching, or practicum credits may be credited toward the degree.
- Requires 30 credits
  - Minimum of 24 credits must be earned at Colorado State University, 21 of which must be at the 500-level and earned after formal admission to the University.

**Master of Science (M.S.)**
- There are two options for students pursuing the M.S.:
  - M.S. Plan A (9 credit hours of thesis work required)
  - M.S. Plan B (3 credit hours of project work)
- Requires 30 hours
  - Minimum of 24 credits must be earned at Colorado State University, 21 of which must be at the 500-level and earned after formal admission to the University.

**Doctor of Philosophy (Ph.D.)**
- 72-credit program option:
  - Designed for students who do not already have a Master of Science degree and only hold a bachelor's degree.
  - Up to 10 credits earned at an accredited college or university may be accepted for transfer if approved by the student's advisory committee, the program, and the Graduate School.
  - A minimum of 62 credits must be earned at CSU after admission to a doctoral program. No more than 6 credits numbered at the 400 level can apply to this degree.
- 42-credit program option:
  - Designed for students who already have an applicable master's degree. Up to 30 credits of the master's degree may count toward the Ph.D.
  - The master's degree can be in a variety of areas including engineering, mathematics, or science. Students with a bachelor's degree in engineering and a master's degree in business are also eligible for this option.
  - Up to 10 credits in courses earned after the date on which the master's degree was awarded may be accepted in transfer if approved by the student's advisory committee, the program, and the Graduate School.
  - A minimum of 32 credits must be earned at CSU after admission to a doctoral program. The 42 credits beyond the master's degree must be earned in courses numbered 500 or above.
Minimum Application Qualifications

The minimum application requirements listed below demonstrate the types of competencies that are required for the Systems Engineering program. These competencies can be learned though coursework or career path if there is adequate professional and technical experience. Please note that meeting the minimum program standards does not ensure admission to the program.

* If applying for the Ph.D. and your B.S. is not in engineering, a master’s in engineering is strongly recommended.
Criteria for Admission

We look at each applicant in a holistic manner – what is the student’s educational and professional background? Given the full view of their background, we ask ourselves, do we feel the students have the competencies to succeed in the program?

The minimum qualifications are listed to get to a “competency level” not to check off the box that a course etc. has been taken. These competencies can be learned though coursework or career path if there is adequate professional and technical experience.

For potential admission into the program, the applicant should show that he/she has the competency level that is required to excel in the Systems Engineering program. For example, directly addressing any perceived shortcomings in the statement of purpose and resume could provide evidence of an acceptable level of analytical/technical competency if the transcripts do not reflect a direct correlation to an analytical skill set.

Applicants could enroll in introductory courses in Systems Engineering and “test the waters” to see if they have the skill set to succeed. If they excel in the introductory coursework, then they could use this as evidence of their capabilities for consideration if they choose to apply for formal admission. Successful completion of initial coursework does not guarantee admission, but would help during the evaluation of the application (see “Coursework Prior to Applying,” pg. 11).

M.S. Plan A and Ph.D. students: Securing a faculty advisor is paramount before an application can be reviewed. If you are unable to secure a faculty advisor, your application is considered incomplete, and is not reviewed. While some students are admissible, they do not always find faculty advisors who have the expertise in their areas of interest or who have the time to serve as advisors. Please see the section, “Securing a Faculty Advisor” (pg. 8) for additional information.

In our Program’s competitive admission situation, applicants are judged not only on the basic criteria, but also in comparison to other applicants. Thus, meeting the basic criteria does not guarantee admission.
Systems Engineering Detailed Application Checklist

Please use the following checklist to be certain you have included everything in your application.

*An asterisk denotes materials required only for a degree program. If you are applying to the Certificate program, do not include these.

Deadlines: Your application should be submitted and everything should be received by
July 1 for fall semester admission or
November 1 for spring semester admission

STEP 1: SECURE A FACULTY ADVISOR
If you are applying to the M.S. Plan A or Ph.D.:

You need to secure a permanent faculty advisor before your application will be considered complete for review. Confirmation from a faculty member that they will advise you is due by the application deadline for each semester. Your online application will ask you for the name of a faculty member with whom you have been in communication and would endorse your application. Please list a name only if that person has explicitly agreed to be your advisor.

This step includes the preparation of a Research Interest Summary. For detailed and necessary information on this process, please see section on “Securing a Faculty Advisor” (page 8).

☐ Send confirmation that a faculty advisor has agreed to advise you to
sys_ engr_info@engr.colostate.edu and CC your advisor
If applying to the Certificate, M.E., or M.S. Plan B, skip STEP 1 and proceed with STEP 2.

STEP 2: BEGIN YOUR ONLINE APPLICATION
You will create an account and can re-visit the application at any time to continue where you last left off:
http://gradadmissions.colostate.edu/apply
- When choosing a program, if you want to do it Online, select the “Distance” option

STEP 3: SUBMIT ALL REQUIRED APPLICATION MATERIALS

You will submit the following through the online application:

☐ Current resumé or CV

☐ *Statement of purpose (2 pages MAXIMUM). This is meant to address the Systems Engineering Admissions Committee and why you would be a good fit for the program. If you are M.S. Plan A or Ph.D., this is different from the Research Interest Summary you will compile, but some of the same information may be used. Topics may include, but are not limited to:
  - Your relevant professional/academic background and skills
  - Why you are interested in Systems Engineering – provide specific areas of interest and application
  - Why you are interested in CSU’s program and what you can contribute to CSU

You will need to have the following sent separately:

☐ One official transcript from every post-secondary institution attended, even those from which you did not earn a degree (transcripts from CSU are not required).
To submit official transcripts, contact your previous institutions to request they submit official transcripts to Colorado State University (use institution code 4075). If a mailing address or email address is required, use the one(s) shown on the next page.
Three letters of recommendation from faculty, supervisors, etc. who can speak to your skills accurately and in detail. You will add names of recommenders through the online application and they will be emailed with instructions to upload the letter. Letters directly from applicants will not be accepted. It is your responsibility to connect with your recommenders and ensure the recommendations are submitted by the appropriate deadline.

**GRE Scores or Waiver Request:** GRE General Test scores are required for students who do not have a U.S. degree.
- If you qualify for a GRE waiver (have earned a degree from a U.S. institution) please email sys. engr info@engr.colostate.edu after your transcript for that degree has been received AND your application has been submitted.
- If you do not qualify for a waiver, submit official GRE General Test scores through the Educational Testing Service (select institution code: 4075, leave the department code blank). Scores are typically received by the University 4-6 weeks after your testing date.
  - All three sections — verbal, quantitative, and analytical — must be submitted. Photocopies are not accepted.

**TOEFL and/or IELTS scores:** Students are exempted from the TOEFL or IELTS requirement if the primary official language of their country is English or if they have recently earned a degree from a U.S. university. It generally takes 3-6 weeks for ETS to send the scores to CSU, so allow plenty of time. Photocopies will not be accepted.

  - **Test of English as a Foreign Language (TOEFL)**
    Submit official scores through the Educational Testing Service (select institution code: 4075, leave the department code blank). The minimum score is 80 on the internet-based test (550 on paper-based).

  - **International English Language Testing System (IELTS)**
    IELTS official score printouts should be sent to the Admissions office (address below). The minimum score is 6.5.

<table>
<thead>

</tr>
</tbody>
</table>

**STEP 4: SUBMIT YOUR ONLINE APPLICATION**

- Pay the non-refundable Graduate School Application fee (only payable after application is submitted)

**STEP 5: CHECK THE STATUS OF YOUR APPLICATION TO ENSURE YOU MEET YOUR DEADLINE**

Please visit [http://gradadmissions.colostate.edu/apply/status](http://gradadmissions.colostate.edu/apply/status) at any time to check that your application checklist is complete. The Systems Engineering program will not provide updates on materials you are still missing.

You are responsible for ensuring all materials are received by the deadline.

For Ph.D. or M.S. Plan A: If your application status shows a complete application, but you have not sent confirmation of a faculty advisor, your application will still be considered incomplete.
Securing a Faculty Advisor

A permanent faculty advisor must be secured before an application to the M.S. Plan A or Ph.D. program is considered complete for review. Temporary advisors do not fulfill this requirement.

1. Start by reading the Systems Engineering faculty bios, which can be found here: [http://www.engr.colostate.edu/se/people/associated-faculty/](http://www.engr.colostate.edu/se/people/associated-faculty/). Your faculty advisor can be a faculty member from any department on campus. Faculty listed at the above link have current association with the Systems Engineering program, but you may seek other advisors across different disciplines if they would match well with your research interests.

2. Prepare your **Research Interest Summary** (2 pages MAXIMUM). This is intended to give a brief overview of your research goals and interests so potential faculty advisors can quickly assess your fit with their areas of expertise. The better you can articulate what it is you hope to accomplish, the better your chances of securing a faculty advisor. Include the following sections in this summary:
   a. Specific areas of research interest
      - What “value-added” do you see in pursuing an MS/PhD for you, your company, industry, etc.?
      - What data set(s) would be critical for your thesis/dissertation?
      - Who would be the key contacts/contributors to a “needs analysis” (this may have already been established via other work in your organization).
      - Can include “key words” section
   b. How these areas of interest fit at CSU
      - Who at CSU is doing research in these areas right now?
      - How would your work fit into potential faculty advisors’ areas of expertise?
   c. Professional or educational experience relevant to the above interests
      - Highlights from your resumé
      - How do you anticipate your research will be funded? Do you have support from your employer, other resources, or are you depending on financial support from CSU to conduct your research?

3. Distribute your Research Interest Summary. You have two ways to do this (can choose one or both):
   a. Send a generalized Research Interest Summary to the Systems Engineering program ([sys engr info@ engr.colostate.edu](mailto:sys engr info@ engr.colostate.edu)). Please note:
      - We collect these for a group review once per application period (generally 1-2 months before the application deadline), so this provides one way to get your name and information in front of faculty members.
      - There is no guarantee a faculty member will match with your research interests or agree to be your advisor
   b. Reach out directly to faculty members by phone or email. Please note:
      - It may be a good idea to customize your Research Interest Summary for each individual faculty member to whom you reach out so you draw clear parallels between your interests and their research.
      - Some faculty members may not respond if you have not made a clear and convincing case as to why you would be a qualified advisee that fits well with that individual faculty member.
• Some faculty are too busy to respond to individual student inquiries, and wait until the group review process each application period.
• Some faculty members may be at capacity with advisees and unable to take on another one.
• Some faculty, especially those not currently associated with Systems Engineering, may opt not to advise students outside of their department.

4. **Confirm your advisor with the Systems Engineering Program.** If a faculty member agrees to advise you, forward proof of agreement on to sys_engr_info@engr.colostate.edu OR send an email to the above email address and CC your advisor confirming who has agreed to advise you. Until this last step is done (must be received by application due date for the semester), your application will be considered incomplete.

Your online application will ask you for the name of a faculty member with whom you have been in communication and would endorse your application. **Please list a name only if that person has explicitly agreed to be your advisor.**

Please remember, finding a faculty advisor is often the longest and most difficult part of the application process, so we encourage you to begin this process well in advance of the application deadline. This is a competitive process: our M.S. Plan A and Ph.D. programs are highly sought-after and we have limited capacity for new students each application period. Additionally, some applicant research interests fall outside of the expertise areas offered by CSU’s faculty and may not be a good fit for our program.

Students who are accepted into the M.E. or M.S. Plan B option may switch to the M.S. Plan A upon finding a faculty advisor.
Delivery of Coursework

For students in our Online programs, course delivery options allow you to study when and where it works best for you, whether that is streaming the lecture from your computer while it’s happening live on campus or watching a recorded version at a time more convenient for you. You also have the opportunity to attend a selection of courses in person at the Fort Collins campus or our Denver South location, embedded within industry.

Courses that are delivered online use our learning management system called Canvas. The system allows you to watch recorded, campus-based lectures, engage in course content and communicate with peers online. Online courses are asynchronous, allowing you to study at the time that best fits your schedule.

In your courses you will:
- View recorded campus-based lectures online
- Download and review lecture notes
- Complete assigned and optional readings
- Communicate and exchange ideas with instructors and fellow students through chat rooms, threaded discussions, and email (online courses)
- Complete individual projects and collaborate on group projects
- Study for and complete exams
- Write course-related papers

Although the format of this degree offers flexibility, it still requires the same amount of work and time as an on-campus graduate program. Depending on your learning and studying style, expect to spend nine to twelve hours per week on a three-credit course. This will vary depending on your learning and studying style.

There is no on-campus requirement for any of the Online Systems Engineering programs. However, for the M.S. (Plan A) and Ph.D. options, faculty may want to meet with students via Skype or in person if schedules allow. The logistics of this should be discussed with your faculty advisor. For Ph.D. students, the preliminary examination involves a presentation and an oral examination conducted over Skype or similar technology. If schedules allow, the examination may be conducted face-to-face.

The M.E. and M.S. can be completed in as little as two years; however, most students with a full-time career take closer to four years to complete either of the master degree programs.

The Ph.D. is generally completed in five or more years, but depends on the intensity of study and previous coursework.
Coursework Prior to Applying

If you are interested in applying to any degree program, you can take one or more classes prior to formally applying to ensure that the program is a good fit for you and to show that you are capable of doing well in graduate-level work. Taking a course does not guarantee your admission to the degree program, but it is one additional factor that the admission committee will consider regarding your application.

Students interested in earning the Certificate must be admitted into the certificate program by the semester in which they finish their certificate coursework.

Students are eligible to use up to 9 credits of coursework prior to formal admissions for a Master’s program and up to 10 credits for a Ph.D. Students must have earned a B or higher in courses for them to apply to the degree (B- and below not accepted).

Per Graduate School policy, grades earned in courses prior to admission do not apply to your degree GPA, which must be at least a 3.0 to graduate.
