ECE 303: Introduction to Communication Principles

IN

Sequences and Series

- Understand convergence of sequences and series
- Know series and sequence representations for exp(x)
- Evaluate finite and infinite geometric sums
- · Know basic linear algebra

Differentiation

- · Compute partial and total derivatives
- · Know chain rule
- Know and can apply Liebnitz rule

Limits

· Apply L'Hospital's rule

Integration

- Integrate by parts
- · Compute definite 1D and 2D integrals

Pre-requisites

• MATH261 with a minimum grade of C; MATH340, may be taken concurrently

Concepts:

- · Sample space, outcomes, events
- · Probability measure
- · Games and counting formulas
- Conditional probability, total probability, and Bayes' rule
- Discrete, continuous, and mixed random variables
- · CDF, PMF, and PDF
- · Mean, conditional mean, moments and their uses
- · Classical distributions and their origins
- Multiple random variables
- · Joint, marginal, and conditional CDF/PDF
- Covariance, correlation, independence
- · Functions of random variables
- Moment generating function, characteristic function
- Independent and identically distributed (iid) random variables
- Central limit theorem
- · Law of large numbers
- Linear transformation of random variables
- · Sums of iid random variables,
- Estimation and confidence intervals
- · Stochastic processes
- Binary communication and error probability
- · Simulations

Applications:

- · Biomedical Engineering
- Communications
- · Control and Robotics
- Finance
- · Lasers and Optics
- · Microelectronics and Semiconductor Processing
- · Radar and Remote Sensing
- · Reliability and Operations Research
- Signal/Image Processing

Tools:

• MATLAB or Python Programs and Simulations

Experiments and Probability Spaces

 Specify probability space and probability measure for an experiment

OUT

- · Understand independence and conditional probability
- · Apply Bayes Rule and Law of Total Probability

Random Variables

- Compute PMF, PDF, CDF, moment generating functions, and moments
- Compute PDF for functions of random variables

Probability Distributions

- Understand Bernoulli, binomial, geometric, Poisson distributions
- Understand exponential, Erlang, Gaussian and uniform distributions

Binary Communication

- · Use standard Gaussian tables
- Compute error probability for binary communication

Averaging and Estimation

- Use Chebyshev's inequality to design averages to meet specifications
- Understand Weak Law of Large Numbers and Central Limit Theorem

Simulations

- Simulate samples and construct histograms
- · Generate arbitrarily distributed random variables
