# ECE 450/451: Digital System Design/Lab

## IN

## Number Systems and Boolean Algebra

• Understand fundamentals of number systems and Boolean algebra

#### Logic

- Know truth tables and canonical expansions
- · Has introduction to K-maps

## Gates and Logic

• Understands representation of logic as gatelevel schematics

## **Energy and Radiation**

- Has knowledge of sequential building blocks
- · Has exposure to FSMs

## **Pre-requisites**

• ECE102 with a minimum grade of C; ECE202 with a minimum grade of C

## **Concepts:**

- Basic implementation of logic gates
- Design representation (gate schematics, HDL)
- Logic families and digital circuit behavior
- Boolean algebra, switching theory, logic minimization (algebra, cubes, Quine-McCluskey, CAD tools)
- Logic synthesis (multi-level gates, function blocks, programmable logic)
- Advanced finite state machine synthesis (state enumeration, minimization, encoding, partitioning)
- Synchronous design (clocking methods, timing parameters, metastability)
- Computer system design fundamentals (ALU, data path, control)
- Design trade-offs (area, speed, power)
- Design methodology and design flow for complex logic circuit

## **Applications:**

- Complex combinational circuits
- Complex sequential circuits: counters, FIFOs, sequence generators
- Systems and subsystems: CPU, I/O controller, memory management

#### **Tools:**

• Design tools: schematic capture, digital simulation, HDL compilation and synthesis, debugging and validation of hardware

## OUT

## **CMOS Logic**

• Understand how CMOS logic circuits are composed to perform arbitrary logic functions

## Hardware Description Language

• Use schematic and HDL representation of combinational and sequential logic

## Logic Minimization

• Understand complex logic minimization through Quine-McCluskey and CAD methods

## **Arithmetic Logic Design**

• Understand the techniques for common arithmetic logic design

## Finite State Machine Design

• Design and optimize a complex finite state machine from design specifications

## **Programmed Logic**

• Understand complex logic implementation in programmable devices: PLA/PLD, FPGA

## **Micro-Architecture**

• Has knowledge of aspects of computer system micro-architecture and design

# Knowledge of Design Methodology and Design Flow

• Use a variety of design and simulation tools to design and validate complex logic circuits
