

ECE 558 Course Syllabus: Fall 2021

Manycore Systems Design using Machine Learning

Instructor: Dr. Ryan G. Kim

Office Location: Engineering C201G

Email: Ryan.G.Kim@colostate.edu

Office Hours: Thursdays 9:30 – 10:30 AM

Class Lectures: Tuesdays and Thursdays 11:00 AM – 12:15 PM; Scott 229

Required Text: None. Research papers will be assigned throughout the semester.

Useful Materials:

- John L. Hennessy and David A. Patterson, "Computer Architecture: A Quantitative Approach," ISBN: 978-0128119051, Morgan Kaufmann 2017.
- Hal Daumé III, "A Course in Machine Learning," [online] <http://ciml.info/>

Course Description: Fundamentals of manycore system design and electronic design automation (EDA). Study the design problems created by increased complexity and specialization of modern manycore systems. Exploration of traditional solutions, their deficiencies in this manycore era, and how machine learning can be utilized to tackle these problems.

Prerequisites: ECE452 – Computer Organization and Architecture OR CS470 – Computer Architecture (Note: CS445 – Introduction to Machine Learning is very useful for this course but is NOT a mandatory prerequisite). Python programming skills.

Grading:

The following is the grading breakdown for each major component:

- | | |
|------------------------|-----|
| - Homework: | 35% |
| - Reading Assignments: | 15% |
| - Class Participation: | 5% |
| - Paper Presentation: | 20% |
| - Midterm: | 10% |
| - Comprehensive Final: | 15% |

Submission: All assignments should be submitted before the deadline. However, late submissions will be accepted at a penalty of 10% for each day late up to a maximum penalty of 50%. For example, the maximum score for two days late is 80% while the maximum score for 5+ days late is 50%.

Collaboration: You are expected to work on all homework problems yourself (or within your team), but *reasonable* collaboration is allowed and encouraged. Copying software from another student is not allowed. No collaboration will be allowed on any exam.

Grading Scale:

While lower cutoffs may be used, the following grade cut-offs are guaranteed:

A	A-	B+	B	B-	C+	C	D
90	86	83	80	76	73	70	60

Academic Integrity:

This course will adhere to the CSU Academic Integrity Policy as found in the General Catalog (<http://www.conflictresolution.colostate.edu/academic-integrity>) and the Student Conduct Code (<http://www.conflictresolution.colostate.edu/conduct-code>). At a minimum, violations will result in a grading penalty in this course and a report to the Office of Conflict Resolution and Student Conduct Services.

All submitted work should be your own. Copying of language, structure, images, ideas, or thoughts of another, and representing them as one's own without proper acknowledgement (from web sites, books, papers, other students, solutions from previous offerings of this course, etc.) and failure to cite sources properly is not acceptable. Sources must always be appropriately referenced, whether the source is printed, electronic, or spoken. My policy is that of **zero tolerance**. Minor first infraction in HWs and presentations will lead to a zero score as well as one letter level (e.g. A to B) reduction in the course grade. Project or Major or repeated infractions in HWs and presentations will result in "F" grade for the course as well as reporting to the Dean's Office.

Tentative Course Calendar¹

Week	Date	Lecture Content
1	Aug 23 – Aug 29	Introduction to manycore systems
2	Aug 30 - Sept 5	Fundamentals of manycore systems; Design challenges of Networks-on-Chip, 3D architectures, and Heterogeneous architectures
3	Sept 6 - Sept 12	Overview of manycore system design space exploration (DSE) Part 1: interconnects and layout
4	Sept 13 - Sept 19	Fundamentals of supervised learning and clustering
5	Sept 20 - Sept 26	Local search and genetic algorithms for DSE; Multi-objective optimization; Supervised learning for DSE
6	Sept 27 - Oct 3	Overview of DSE Part 2: hyper-parameter optimization for architecture and software
7	Oct 4 - Oct 10	Fundamentals of Bayesian optimization; Bayesian optimization for DSE
8	Oct 11 - Oct 17	Midterm
9	Oct 18 - Oct 24	Overview of dynamic on-chip resource management
10	Oct 25 - Oct 31	Overview of dynamic on-chip resource management (Cont)
11	Nov 1 - Nov 7	Fundamentals of Markov decision processes, reinforcement learning, and imitation learning
12	Nov 8 - Nov 14	Voltage frequency islands (VFI); Control theoretic approaches and Machine learning for dynamic VFIs; Thermal management
13	Nov 15 - Nov 21	Domain-specific architectures; Future directions
14	Nov 22 - Nov 28	Fall Break
15	Nov 29 - Dec 5	Paper Presentations
16	Dec 6 - Dec 12	Wrapping up and final exam review
17	Dec 13 - Dec 17	Final Exam

¹ This schedule may be revised during the term.
