

# Running your first job on the W. M. Keck High Performance Computing Cluster

## Want to run sample job?

Log into the cluster and run these four commands.

- `module load mpi/openmpi`
- `mkdir ~/my_mpi_job && cd ~/my_mpi_job`
- `cp /usr/local/examples/mpi/* ~/my_mpi_job`
- `qsub sample_submission.sh`

That's it! Look for output in your current directory with the "ls" command and read output files with "cat <file\_name>" or "less <file\_name>" commands.
