COLORADO STATE UNIVERSITY

# SUMMER PROGRAM

**Calling all future engineers!**

**Register for the Department of Mechanical Engineering’s high school summer program today!**

During a week-long interactive summer program on the CSU campus, high school students will participate in activities that will introduce them to the possibilities of Science, Technology, Engineering, and Mathematics (STEM). Students will utilize many of CSU’s state-of-the-art mechanical engineering laboratories, including its 3-D printing facility, mechatronics lab, and machine shop to create their designs.

**For more information  
and to register visit:**

## Designing Your World

Ages: 14 - 16 | July 14 - 18 | 9 AM - 4 PM

Students will work on projects chosen to simulate real-world, entrepreneurial, engineering problems. Students will be tasked with identifying a problem and then design, build, test, iterate, and demonstrate a solution. These hands-on projects will help students to develop a scientific view of the world around them and enhance their critical thinking.
