During a week-long interactive summer program on the CSU Spur campus in Denver, middle school students will participate in activities introducing them to the wonders of Science, Technology, Engineering, and Mathematics (STEM).

**Engineering Your World**  
*Ages: 12 - 14 | July 15 - 19 | 9 AM - 3:30 PM*  
Students will engage in hands-on projects exploring the fields of mechanical, civil, electrical, chemical and biological engineering. In the past, students have designed, constructed, and tested spaghetti bridges, prosthetic legs, and a Mars lander egg drop.

**Designing Your World**  
*Ages: 14 - 16 | July 22 - 26 | 9 AM - 3:30 PM*  
Students will work on projects chosen to simulate real-world, entrepreneurial, engineering problems. Students will be tasked with identifying a problem and then design, build, test, iterate, and demonstrate a solution. In past years, students have created autonomous model cars and remote controlled submarines.
